The NEW ENGLAND JOURNAL of MEDICINE

EDITORIAL OFFICES

October 10, 2013

Dear Physician:

As a resident nearing completion of your training, I'm sure that finding the right employment opportunity is a top priority for you. The *New England Journal of Medicine* (NEJM) is the leading source of information about job openings, especially practice opportunities, in the country. Because we want to assist you in this important search, a complimentary reprint of the classified advertising section of the October 10, 2013, issue is enclosed.

The NEJM CareerCenter website (NEJMCareerCenter.org) continues to receive positive feedback from physician users. Because the site was designed specifically based on advice from your colleagues, many physicians are comfortable using it for their job searches and welcome the confidentiality safeguards that keep personal information and job searches private. Physicians have the flexibility of looking for both permanent and *locum tenens* positions in their chosen specialties and desired geographic locations.

At NEJM CareerCenter, you will find:

- Hundreds of quality, current openings — not jobs that were filled months ago
- Email alerts that automatically notify you about new opportunities
- An iPhone app that allows you to easily search and apply for jobs directly from your phone
- Sophisticated search capabilities to help you pinpoint jobs that match your search criteria
- A comprehensive resource center with career-focused articles and job-seeking tips

If you are not currently an NEJM subscriber, I invite you to become one. The *Journal* has recently added many exciting enhancements that further increase its relevance to you as you move forward in your career. If you are interested in subscribing, please call NEJM Customer Service at (800) 843-6356 or visit NEJM.org.

Our popular Clinical Practice articles are evidence-based reviews of topics relevant to practicing physicians. A reprint of the September 19, 2013, article, "Clinical Practice: Carotid Stenosis," is included. Expanding upon this series, we created Clinical Therapeutics — review articles that focus on a specific therapy (e.g., medication, device, or procedure) for a given clinical problem.

NEJM.org offers an interactive and personalized experience, including specialty pages and alerts and access to multimedia features like Videos in Clinical Medicine, which allow you to watch common clinical procedures, and Interactive Medical Cases, which allow you to virtually manage an actual patient's case from presentation to outcome. Take a Case Challenge, which allows you to read the full case description of an upcoming Case Record of the Massachusetts General Hospital and vote on the diagnosis, and view the most recent Quick Take, an animated overview of a study on CT screening for lung cancer published last week. You can learn more about these features at NEJM.org.

A career in medicine is challenging, and current practice leaves little time for keeping up with changes. With this in mind, we have developed these new features to bring you the best, most relevant information in a practical and clinically useful format each week.

On behalf of the entire *New England Journal of Medicine* staff, please accept my wishes for a rewarding career.

Sincerely,

Jeffrey M. Drazen, MD

Great Jobs. Less Search.

Sign up for Jobs by Email from NEJM CareerCenter.

You know you can count on the *New England Journal of Medicine* for high-quality job listings. But did you know you can also save time with our Jobs by Email service?

Just indicate your specialty, desired position and preferred location. We'll send you an email when a job that fits those criteria is listed at NEJM CareerCenter. It's that simple.

Find the right job without searching — it's something a busy physician should check out. Go to NEJMCareerCenter.org and click on Create a Job Alert to get started.

CLINICAL PRACTICE

Caren G. Solomon, M.D., M.P.H., *Editor*

Carotid Stenosis

James C. Grotta, M.D.

This Journal feature begins with a case vignette highlighting a common clinical problem. Evidence supporting various strategies is then presented, followed by a review of formal guidelines, when they exist. The article ends with the author's clinical recommendations.

A 53-year-old woman who smoked and had hypertension had brief numbness of the right side of her body. Six months later, aphasia and right hemiparesis suddenly developed, and they resolved after 48 hours. Computed tomographic angiography (CTA) showed left internal-carotid-artery stenosis of 70% just distal to the bifurcation. Magnetic resonance imaging (MRI) confirmed a left frontotemporal infarct without hemorrhagic transformation or cerebral edema. Cardiac evaluation was normal. What is the appropriate management of this patient's carotid stenosis?

THE CLINICAL PROBLEM

Carotid artery disease causes approximately 10 to 20% of strokes, and appropriate intervention is important for secondary and possibly primary stroke prevention. The degree of carotid stenosis is the strongest determinant of stroke risk.

ATHEROSCLEROSIS

Atherosclerosis, the most common disease affecting the carotid artery, occurs most frequently at its bifurcation (Fig. 1A and 1B). Atherosclerotic plaques cause symptoms most often through distal embolism to branches of the retinal or cerebral arteries; hemodynamically significant luminal stenosis may also result in critical reduction of perfusion.

Most emboli result from activation of platelets on the plaque surface; less frequently, they result from cholesterol particles. An “unstable plaque” with rupture of the cap may cause emboli.¹ Emboli in retinal arterioles lead to transient monocular blindness (amaurosis fugax).² Emboli in the cerebral circulation most often lodge in the middle cerebral-artery branches, but they can also end up in anterior or posterior cerebral-artery branches, depending on the anatomy of the circle of Willis. If patients who have had a stroke attributed to carotid disease are questioned closely, at least 50% report symptoms preceding the stroke that are consistent with a transient ischemic attack (TIA).³ Stroke syndromes related to carotid disease involve some combination of motor or sensory symptoms (involving the contralateral face, arm, or leg) or speech, language, or visual symptoms.

Reduction of flow due to high-grade stenosis causes symptoms referable to brain regions at the border zones between the anterior, middle, and posterior cerebral arteries, where perfusion pressure is the lowest and most vulnerable to further reduction by proximal stenosis.⁴ Such lesions often cause repetitive TIAs that are brief (<1 minute), sometimes with limb shaking, as compared with embolic TIAs, which tend to be longer (5 to 30 minutes).⁵ Border-zone (“watershed”) infarcts can be distinguished from embolic infarcts on brain imaging (see Fig. S1a and S1b in the Supplementary Appendix, available with the full text of this article at NEJM.org).

KEY CLINICAL POINTS

CAROTID STENOSIS

- Carotid artery disease is a common cause of stroke and should be assessed by means of one of several readily available noninvasive tests in all patients who have had a transient ischemic attack (TIA) or stroke in the carotid-artery distribution.
- Control of smoking, hypertension, and hyperlipidemia and the use of an antiplatelet agent are indicated to reduce the risk of stroke among persons with carotid artery disease.
- In patients with an ischemic stroke or a TIA in the carotid-artery distribution, carotid endarterectomy should be considered within 2 weeks if there is stenosis of more than 70% of the diameter of the ipsilateral carotid artery (measured according to the method used in the North American Symptomatic Carotid Endarterectomy Trial) due to atherosclerosis. There is less benefit in patients with stenosis of 50 to 69% and in asymptomatic patients, and there is no benefit in patients with stenosis of less than 50%.
- Carotid stenting is an alternative to carotid endarterectomy, particularly in patients at high surgical risk and in younger patients (<70 years of age).

The prognosis for patients with carotid disease is most closely linked to the degree of stenosis, with a 2-mm residual luminal diameter or a 60 to 70% reduction in diameter associated with a marked increase in the risk of stroke.⁶ Plaque ulcerations are common, but they do not strongly correlate with subsequent ipsilateral ischemic stroke.⁷

Whereas total occlusion of the carotid in some patients results in a devastating stroke, it can be asymptomatic in patients with adequate collateral flow to the intracranial arteries.⁸ The contralateral carotid provides collateral flow through the anterior communicating artery (Fig. S2 in the Supplementary Appendix). Consequently, contralateral carotid stenosis or occlusion is an important determinant of risk that should be considered in planning treatment. Carotid siphon atherosclerosis can also cause TIAs and strokes.⁹

DISSECTION AND FIBROMUSCULAR DYSPLASIA

Dissection of the carotid artery is a common cause of stroke in patients younger than 45 years of age, and it is frequently detected by means of noninvasive vascular imaging.^{10,11} Carotid dissection usually occurs about 2 cm distal to the bifurcation (Fig. S3a in the Supplementary Appendix), and it may be related to trauma to the artery by the transverse processes of the C2 and C3 vertebrae or the styloid process. Dissection, which can occur spontaneously, is due to a hematoma in the tunica media that ruptures through the intima and compromises the arterial lumen. If the dissection extends toward the adventitia, a dissecting aneu-

rysm (often erroneously called a pseudoaneurysm) can develop, but these aneurysms rarely bleed unless the dissection extends intracranially. Considerable ipsilateral neck, facial, or head pain occurs in more than 60% of dissections, and if such pain is present after trauma or in association with a TIA or stroke, dissection should be suspected. Horner's syndrome may also be present as a result of injured sympathetic nerves in the arterial wall, and lower cranial nerves may be compressed. Genetic collagen abnormalities such as the Ehlers-Danlos syndrome (type IV) should be considered in patients with spontaneous dissection.

Fibromuscular dysplasia is twice as common in women as in men,¹¹ and it is marked by fibrotic thickening of the arterial wall, most often the media (Fig. S3b in the Supplementary Appendix). Fibromuscular dysplasia is associated with intracranial aneurysms and carotid dissection. Both dissection and fibromuscular dysplasia can cause strokes due to embolization or hemodynamically significant narrowing of the luminal diameter.

Other, less common arterial diseases are beyond the scope of this review. Coiling, looping, and kinking of the extracranial carotids are common but rarely of pathologic significance.¹²

STRATEGIES AND EVIDENCE

DIAGNOSIS

A carotid bruit may signal the presence of clinically significant internal carotid artery disease; this finding is present in 70 to 89% of patients with a

Figure 1. Atherosclerosis at the Bifurcation of the Carotid Artery in the Patient in the Case Vignette.

Panel A shows a cerebral arteriogram indicating stenotic plaque (arrow) before stenting. Panel B shows a three-dimensional reconstruction of the angiogram. Panel C shows calculation of the percentage of stenosis with the use of the North American Symptomatic Carotid Endarterectomy Trial criteria. The minimal diameter (X3) is 0.89 mm, and the distal diameter (X2) is 3.30 mm. The percentage of stenosis is calculated as $[1 - (X3 \div X2)] \times 100$, which in this case is 73%. Images courtesy of Peng Chen, M.D.

2-mm luminal narrowing. However, a bruit is a nonspecific finding, since it is heard in 5% of patients who are 45 to 80 years of age in the absence of clinically significant internal carotid disease.¹³

The various tests for evaluating carotid disease are listed in Table 1. The most common screening test is duplex Doppler ultrasonography (Fig. 2). Ultrasonography is highly accurate in identifying calcification of carotid-artery plaque and intraplaque hemorrhage and measuring the degree of stenosis,¹⁴ and it is indicated in patients who have had ischemic symptoms in the carotid-artery distribution or who have a carotid bruit and would be candidates for intervention. A peak systolic velocity in excess of 200 cm per second usually indicates stenosis of 50% or more.¹⁵

CTA (Fig. 3) and magnetic resonance angiography (MRA) are widely used to evaluate the carotid artery.^{16,17} Carotid Doppler ultrasonography with either CTA or MRA may be sufficient for making clinical decisions about the management of carotid disease. However, in some cases, cerebral angiography may be necessary to provide additional anatomical detail¹⁸ (Fig. 1A and 1B).

The most important information gained from each of these tests is the percentage of stenosis. The measurement method used in the North American Symptomatic Carotid Endarterectomy Trial (NASCET)¹⁹ is used most widely (Fig. 1C). The diameter of the smallest residual lumen is compared with the diameter of the normal artery distal to the carotid bifurcation, according to the following formula: the percentage of stenosis = $[1 - (\text{minimal diameter} \div \text{distal diameter})] \times 100$. Imaging also identifies the location of the bifurcation in relation to the angle of the jaw, the extent of plaque, distal arterial tortuosity or stenosis, and the status of contralateral carotid and

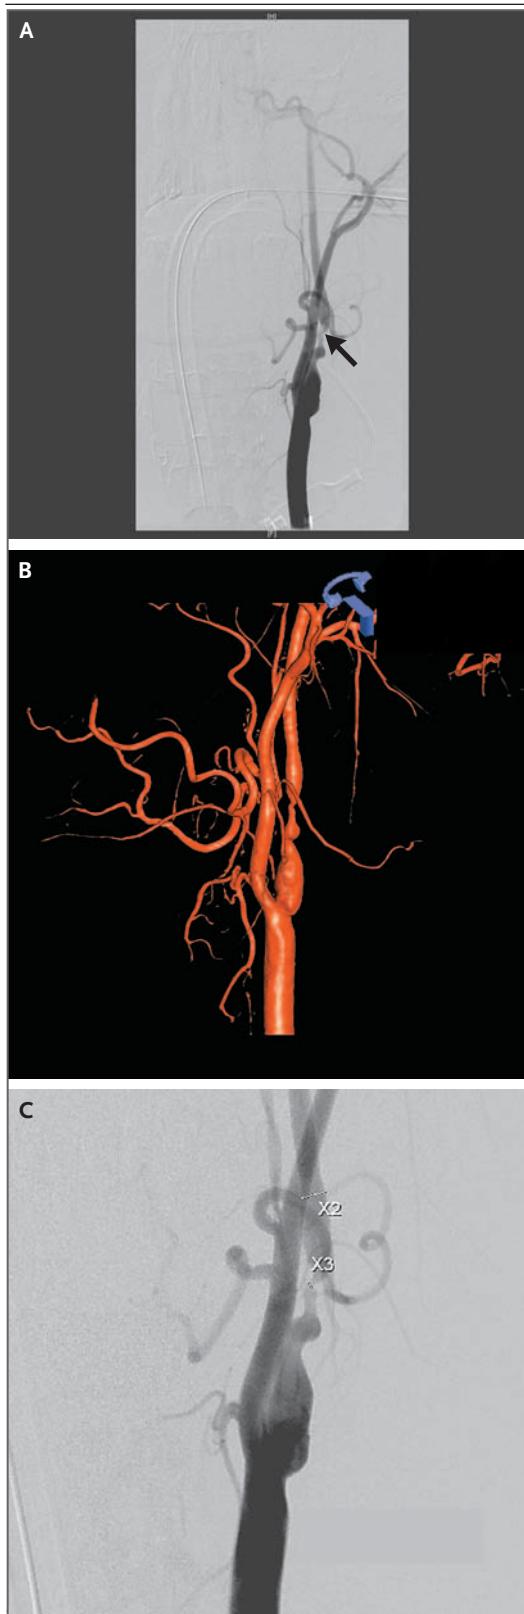

Table 1. Tests to Detect Carotid Stenosis.

Test	Feasibility	Accuracy	Risks
Ultrasonography	Widely available, rapidly performed	Detects bifurcation only	None
Magnetic resonance angiography	Requires patient to be immobile for duration of test; not feasible in patients with metallic implants or in severely obese patients	Cannot discriminate subtotal from total occlusion	Gadolinium usually not needed; when used, it carries risk of nephrogenic systemic fibrosis; gadolinium contraindicated in patients with renal insufficiency
Computed tomographic angiography	Widely available, rapidly performed	Provides good resolution of entire vascular tree	Iodinated contrast material carries risk of nephrotoxic effects; computed tomographic angiography should be avoided in patients with renal insufficiency
Catheter angiography	Requires angiography team	Excellent	0.5–1.0% Risk of stroke, myocardial infarction, arterial injury, retroperitoneal bleeding

collateral flow, and it can usually be used to distinguish atherosclerosis from other conditions (Fig. S3a and S3b in the Supplementary Appendix).

Other techniques to assess carotid atherosclerosis have been described; these include high-resolution MRI of the arterial wall to examine the morphologic characteristics of the plaque,¹ ultrasonographic assessment of the carotid intima-media thickness,²⁰ detection of microemboli by means of ultrasonography,²¹ and imaging of adhesion molecules on the surface of the plaque or inflamed area.²² However, data are lacking to determine the role of these techniques, if any, in clinical practice.

MEDICAL MANAGEMENT

Aggressive treatment of modifiable risk factors for carotid atherosclerosis — especially hypertension and hyperlipidemia — and cessation of smoking are central to stroke prevention. Measures to reduce stroke risk have been reviewed in a previous Clinical Practice article²³ and in guidelines for primary and secondary stroke prevention.^{24,25}

Some aspects of risk-factor management particular to patients with severe carotid-artery stenosis warrant mention. In patients with hypertension, treatment goals must take into account the risk of reduced cerebral perfusion with overly aggressive treatment, pending correction of stenosis. Treated patients should be followed carefully for clinical deterioration, and relative hypotension should be immediately corrected. Furthermore, special attention to blood-pressure control is re-

quired to avoid hypoperfusion during carotid endarterectomy or stenting and the hyperperfusion syndrome immediately afterward.²⁶

Statin drugs are effective for both primary and secondary stroke prevention, and they may lead to stabilization and even regression of intima-media thickness of the carotid-artery wall.²⁷

Antiplatelet drugs logically would be of particular benefit in patients with carotid plaques that cause platelet activation. Patients undergoing carotid endarterectomy have a reduced risk of perioperative stroke if they receive aspirin preoperatively.²⁸ For long-term secondary prevention of stroke, current guidelines recommend aspirin, clopidogrel, or the combination of aspirin and dipyridamole.²⁴ The combination of aspirin and clopidogrel is not recommended because of an increased risk of bleeding, but data from studies of coronary stenting suggest that this combination should be routinely used for a short period (e.g., 1 to 3 months) after carotid-artery stenting.²⁹

Current guidelines suggest that anticoagulation therapy with heparin followed by warfarin can be used for 3 to 6 months in patients with acute extracranial dissection.²⁴ Newer oral anticoagulants have not been studied in these patients. Patients with extensive trauma, intracranial dissection, or dissection that is discovered weeks after it occurred probably should not receive anticoagulation therapy. Treatment with antiplatelet agents is a reasonable alternative; a study comparing warfarin with aspirin in patients with a carotid dissection is ongoing.³⁰ Patients with fibromus-

cular dysplasia usually receive aspirin for stroke prevention.

CAROTID ENDARTERECTOMY

Symptomatic Carotid Stenosis

In several randomized trials involving patients who had a TIA or stroke associated with ipsilateral carotid stenosis (symptomatic stenosis), carotid endarterectomy reduced the subsequent risk of stroke.³¹⁻³⁴ In the NASCET,^{31,32} among patients with stenosis of 70% or more, the 2-year risk of ipsilateral stroke was 9% in the group of patients randomly assigned to carotid endarterectomy (plus medical therapy) versus 26% in the group assigned to medical therapy alone ($P<0.001$). The 5-year risks were 15.7% in the endarterectomy group versus 22.2% in the medical-therapy group ($P=0.04$) among patients with stenosis of 50 to 69%. There was no benefit of carotid endarterectomy in patients with stenosis of less than 50%. Among all patients who were randomly assigned to carotid endarterectomy, perioperative strokes occurred in 5.5% (nondisabling in 3.7% and disabling in 1.8%), death in 1.1%, and wound hematoma in 5.5%. The European Carotid Surgery Trial,³³ another randomized trial comparing carotid endarterectomy plus medical management with medical management alone, yielded similar results, with a significant benefit of surgery in patients with stenosis of at least 70%.

A meta-analysis of the major trials of carotid endarterectomy showed that the benefit from this procedure was greatest when it was performed within 2 weeks after a TIA or stroke, rather than later.³⁵

Asymptomatic Carotid Stenosis

Carotid stenosis that is not associated with ipsilateral symptoms (asymptomatic stenosis) is typically detected on screening ultrasonographic examination or as part of the investigation of a symptomatic contralateral artery. The most appropriate management of asymptomatic stenosis is less clear than that for symptomatic disease, despite several randomized trials addressing this question.³⁶⁻⁴¹ The Asymptomatic Carotid Atherosclerosis Surgery study,³⁹ which involved patients with stenosis of more than 60% who were randomly assigned to carotid endarterectomy with medical management or medical management alone, was discontinued after a mean follow-up of 2.7 years. The combined risk of perioperative stroke or death

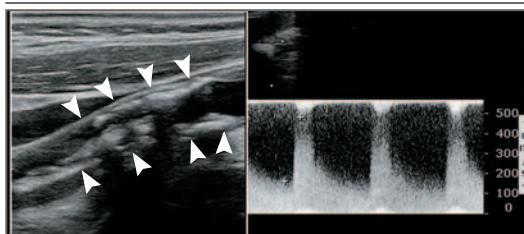

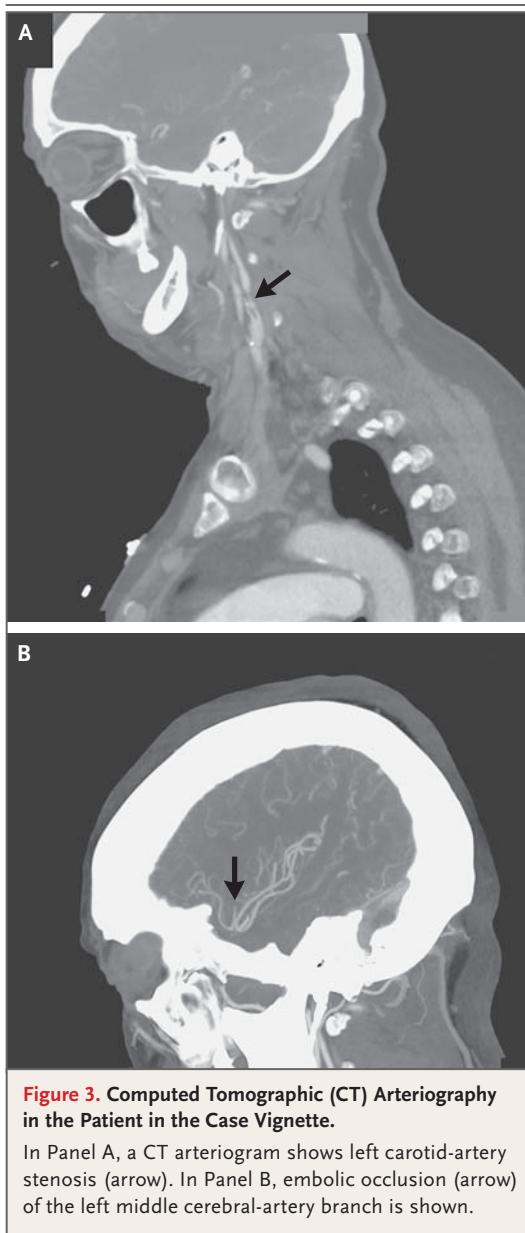

Figure 2. Duplex Ultrasonography of the Carotid Artery Showing Severe Carotid Stenosis.

On the left, the arrowheads outline the internal carotid artery. The plaque is visible in the lumen. On the right, the spectral Doppler waveform shows elevated peak systolic and end diastolic velocities (486 and 164 cm per second, respectively) that are consistent with stenosis of more than 70%. The ultrasonographic device (CX50, Philips Healthcare) had a linear 3-to-12-MHz transducer. Images courtesy of Andrew Barreto, M.D.

was 1.5%. The risk of ipsilateral stroke projected over 5 years was 5.1% with carotid endarterectomy versus 11.0% without carotid endarterectomy ($P=0.004$). A similar study in Europe, the Asymptomatic Carotid Surgery Trial,⁴⁰ showed a similar projected reduction in the risk of stroke with carotid endarterectomy but a higher rate of perioperative stroke or death (3.1%). In both studies, the absolute risk reduction for stroke associated with carotid endarterectomy was only 1 percentage point per year; this finding indicates that a substantial benefit is likely only in patients with a prolonged life expectancy. The absolute risk reduction was 11.0 percentage points among men but only 2.8 percentage points among women. In post hoc analyses, besides female sex, factors associated with increased surgical risk included a long plaque dimension and contralateral carotid stenosis or occlusion.⁴¹ Surgical expertise and surgical technique are critically important for minimizing the risk of perioperative complications and realizing the small benefit of carotid endarterectomy. Since these trials were carried out more than two decades ago, before the use of statins and other aggressive approaches to the management of risk factors, it is possible that a benefit of carotid endarterectomy in asymptomatic patients would no longer be observed if both groups received current medical treatment.

CAROTID STENTING

Carotid-artery angioplasty with stenting has emerged as an alternative to carotid endarterectomy in patients at high risk for complications

from endarterectomy such as contralateral occlusion or severe coronary artery disease. The Stenting and Angioplasty with Protection in Patients at High Risk for Endarterectomy study⁴² showed that stenting (with an emboli-protection device) was not inferior to endarterectomy with respect to the rate of a composite outcome of stroke, myocardial infarction, or death at 30 days (4.8% vs. 9.8%) and the rate of ipsilateral stroke or death between 31 days and 1 year. Other trials, however, were discontinued because of high rates of periprocedural neurologic events with

carotid stenting.⁴³⁻⁴⁶ More recently, the Carotid Revascularization Endarterectomy versus Stenting Trial (CREST)⁴⁷ and the International Carotid Stenting Study (ICSS)⁴⁸ have provided additional informative results. In CREST, symptomatic and asymptomatic patients with stenosis of 50% on angiography or 70% or more on ultrasonography or CTA were randomly assigned to the study treatments; this study required training of interventionists and used distal protection devices. CREST showed no significant difference between the stenting and endarterectomy groups overall in the rates of a composite outcome that included major periprocedural complications (stroke, myocardial infarction, or death) and ipsilateral stroke over a 4-year follow-up period (7.2% vs. 6.8%). Whereas the presence or absence of symptoms did not significantly affect the findings, there was a significant interaction of treatment with age: patients younger than 70 years of age had a slightly better outcome after carotid stenting, whereas older patients benefited more from carotid endarterectomy. The endarterectomy group, as compared with the stenting group, had a higher frequency of periprocedural myocardial infarction (2.3% vs. 1.1%) but a lower frequency of periprocedural stroke (2.3% vs. 4.1%). At 2 years of follow-up, the rate of carotid restenosis (a predictor of subsequent stroke) was relatively low (approximately 6%) in both groups.⁴⁹ Among patients in the ICSS, only short-term follow-up has been reported, but for those randomly assigned to carotid stenting there was a significantly increased risk of stroke, death, or myocardial infarction at 120 days. In both studies, medical management was at the discretion of the treating physician.

In aggregate, the available data provide support for carotid endarterectomy or carotid stenting in most patients with symptomatic stenosis of more than 70% (number needed to treat to prevent one stroke at 24 months, 6),³¹ in selected patients with symptomatic stenosis of 50 to 69% (number needed to treat to prevent one stroke at 5 years, 15),³² and in a selected subgroup of asymptomatic patients with a low risk of periprocedural complications (e.g., no clinically significant cardiopulmonary or other coexisting conditions and an age younger than 70 years) (number needed to treat to prevent one stroke at 5 years, 17).³⁹ Carotid endarterectomy is currently considered the preferable intervention in most patients, although selected patients (e.g., those

younger than 70 years of age with favorable anatomical features or symptomatic patients with severe stenosis who have coexisting conditions conferring a high surgical risk) may benefit more from carotid stenting.

AREAS OF UNCERTAINTY

The benefits of carotid endarterectomy or carotid stenting in addition to current medical therapy, as compared with current medical therapy alone, are uncertain in patients with asymptomatic carotid stenosis, especially women. The most appropriate timing and choice of carotid intervention after stroke also remain uncertain, as do the timing and choice of procedure in patients with carotid stenosis who require other major surgery, especially coronary-artery bypass grafting. It is not known whether improvements in techniques of carotid stenting will result in reduced rates of complications. Data are lacking on the benefits and risks of carotid stenting in patients with dissection or fibromuscular dysplasia; these patients are at high risk for complications from intervention, and dissections often heal with medical management.¹¹ The most appropriate duration of dual antiplatelet therapy after carotid stenting is also uncertain.

GUIDELINES

Guidelines for the treatment of patients with carotid stenosis have been published previously.^{24,25,29,50} The recommendations in this article are generally consistent with these guidelines.

CONCLUSIONS AND RECOMMENDATIONS

The patient described in the vignette had a TIA, and 6 months later she had a stroke due to embolization from a stenotic atherosclerotic plaque in the left internal carotid artery. She is at high risk for subsequent stroke, and the carotid stenosis should be treated. On the basis of a meta-analysis of randomized trials and current guidelines, I would recommend treatment within 2 weeks after her stroke.^{29,35,50} Either carotid endarterectomy or stenting is an option for management. Whereas carotid endarterectomy is preferred in many cases, given this patient's relatively young age as well as her recent stroke, which increases the risks associated with surgery and general anesthesia, I would consider her to be a good candidate for carotid stenting as long as the lesion could be treated with this approach. Advice and treatment are needed to help her quit smoking. Her hypertension should be well controlled; she should receive statin therapy. Although the most appropriate duration of combined therapy with aspirin and clopidogrel after stent placement remains unclear, I would provide treatment with aspirin and clopidogrel for 1 month and then aspirin indefinitely.

Dr. Grotta reports receiving consulting fees from Merck, Haemonetics, Genentech, Janssen, Pfizer, Lundbeck, and Ferrer; lecture fees from IPG and Vindico; a grant to his institution from Haemonetics; and royalties from patents regarding a method for treating cerebral ischemia. No other potential conflict of interest relevant to this article was reported.

Classified Advertising Rates

We charge \$7.50 per word per insertion. **Bold typeface** is available for \$7.80 per word per insertion (**entire ad must be bold typeface**). A 2- to 4-time frequency discount rate of \$6.00 per word per insertion and \$6.80 per word per insertion for **bold typeface** is available. A 5-time frequency discount rate of \$5.85 per word per insertion and \$6.10 per word per insertion for **bold typeface** is also available. In order to earn the 2- to 4-time or 5-time discounted word rate, the request for an ad to run in multiple issues must be made upon initial placement. The issues do not need to be consecutive. **Web fee:** Classified line advertisers may choose to have their ads placed on NEJM CareerCenter for a fee of \$70.00 per issue per advertisement. The web fee must be purchased for all dates of the print schedule. The choice to place your ad online must be made at the same time the print ad is scheduled. **Note:** The minimum charge for all types of line advertising is equivalent to 25 words per ad. Confidential reply boxes are an extra \$75.00 per insertion plus 4 words (Reply Box 0000, NEJM). We will send the responses directly to you every Tuesday and Thursday. Purchase orders will be accepted subject to credit approval. For orders requiring prepayment, we accept payment via Visa, MasterCard, and American Express for your convenience, or a check. All classified line ads are subject to the consistency guidelines of NEJM.

How to Advertise

All orders, cancellations, and changes must be received in writing. E-mail your advertisement to us at ads@nejmcareercenter.org, or fax it to 1-781-895-1045 or 1-781-893-5003. We will contact you to confirm your order. Our closing date is typically the Friday 20 days prior to publication date; however, please consult the rate card online at nejmcareercenter.org or contact the Classified Advertising Department

at 1-800-635-6991. Be sure to tell us the classification heading you would like your ad to appear under (see listings above). If no classification is offered, we will determine the most appropriate classification. Cancellations must be made 20 days prior to publication date. Send all advertisements to the address listed below.

Website: nejmcareercenter.org

How to Calculate the Cost of Your Ad

We define a word as one or more letters bound by spaces. Following are some typical examples:

Bradley S. Smith III, MD.....	= 5 words
Send CV	= 2 words
December 10, 2007	= 3 words
617-555-1234	= 1 word
Obstetrician/Gynecologist ...	= 1 word
A	= 1 word
Dalton, MD 01622	= 3 words

As a further example, here is a typical ad and how the pricing for each insertion is calculated:

MEDICAL DIRECTOR — A dynamic, growth-oriented home health care company is looking for a full-time Medical Director in greater New York. Ideal candidate should be board certified in internal medicine with subspecialties in oncology or gastroenterology. Willing to visit patients at home. Good verbal and written skills required. Attractive salary and benefits. Send CV to: Reply Box 0000, NEJM.

This advertisement is 58 words. At \$7.50 per word, it equals \$435.00. Because a reply box was requested, there is an additional charge

of \$75.00 for each insertion. The price is then \$510.00 for each insertion of the ad. This ad would be placed under the Chiefs/Directors/Department Heads classification.

How to Respond to NEJM Box Numbers

When a reply box number is indicated in an ad, responses should be sent to the indicated box number at the address under "Contact Information."

Classified Ads Online

Advertisers may choose to have their classified line and display advertisements placed on NEJM CareerCenter for a fee. The web fee for line ads is \$70.00 per issue per advertisement and \$140.00 per issue per advertisement for display ads. The ads will run online two weeks prior to their appearance in print and one week after. For online-only recruitment advertising, please visit nejmcareercenter.org for more information, or call 1-800-635-6991.

Policy on Recruitment Ads

All advertisements for employment must be non-discriminatory and comply with all applicable laws and regulations. Ads that discriminate against applicants based on sex, age, race, religion, marital status or physical handicap will not be accepted. Although the *New England Journal of Medicine* believes the classified advertisements published within these pages to be from reputable sources, NEJM does not investigate the offers made and assumes no responsibility concerning them. NEJM strives for complete accuracy when entering classified advertisements; however, NEJM cannot accept responsibility for typographical errors should they occur.

NEJM is unable to forward product and service solicitations directed to our advertisers through our reply box service.

The NEW ENGLAND
JOURNAL of MEDICINE

one
MEDICAL GROUP

The future of medicine
is closer than you think.

Don't wait for tomorrow to
be a part of change today.

One Medical Group is a primary care medical practice designed by physicians who got tired of working within a broken system. So we decided to start a primary care group designed on the original principles of quality medicine: listening, evidence, collaboration, trusted relationships—and more time with patients, not paperwork.

Recognized by The New York Times for our innovative model (started by the original designer of Epocrates), we're searching for the best and brightest internal medicine and family physicians who believe there's a better way to practice medicine. Successful candidates should be:

- Academically-trained and interested in practicing evidence-based medicine
- Comfortable with a broad spectrum of primary care, disease management and prevention
- Open to constantly improving care processes
- Comfortable with information technology
- Wanting to spend time with patients, not paperwork
- Interested in setting a new standard in primary care and being part of a change movement

See our opportunities at onemedical.com/jobs
or please email your CV to Emerson Moses at
ermoses@onemedical.com

Chief, Commack Medical Oncology Service Memorial Sloan-Kettering Cancer Center

Memorial Sloan-Kettering Cancer Center (MSKCC) is seeking a dynamic oncologist to join the Department of Medicine as Chief of the Commack Medical Oncology Service. MSKCC at Commack, NY, on Long Island, is a state of the art, free-standing complex with 7 disease-focused medical oncologists, radiation oncologists, radiologists, surgical oncologists, and a neuro-oncologist. The highly successful Commack Medical Oncology Service had 19,000 medical oncology visits in 2012, and administered 16,000 infusions.

The Chief will lead the Service through a phase of strategic growth over the next 5 years. The ideal candidate will have a track record of superior clinical service, academic accomplishment, and excellence in teaching and leadership, and possess effective communications skills.

The candidate must be eligible for medical licensure in New York, board certified in Medical Oncology, and otherwise qualified for an appointment to the faculty of MSKCC; experience in the management of the hematologic malignancies would be beneficial.

Interested candidates should submit a letter of interest, and their curriculum vitae and bibliography to:

Han Xiao, M.D., Chair
Medical Oncology Service Chief Search
c/o Clara Irizarry, Administrative Manager
Office of Academic Recruitment, MH
Memorial Sloan-Kettering Cancer Center
1275 York Avenue, New York, NY 10065

HOSPITALIST

Evenings, 6:30pm-2:30am

Beth Israel Deaconess HealthCare, a large network of highly-skilled primary care physicians and specialists and a teaching affiliate of Harvard Medical School, seeks a board certified/board eligible Hospitalist. This position will be focused on admissions with the support of a House Officer at our Milton Campus, an 88-bed Acute Care/Medical-Surgical hospital. ICU coverage with no critical procedures. 5 on 5 off/flexible schedule. We have recently introduced a Surgical PA program with goal to provide full 24/7 surgical support in 2014. We have an unparalleled reputation for patient care backed by a superior support team.

Candidates can expect some of the most competitive physician benefits in the Boston area.

Please send a CV and letter of interest electronically to:

Monique Riebe

We are an Affirmative Action/Equal Opportunity Employer.
Women and minorities are encouraged to apply.

Kaiser Permanente Los Angeles Medical Center, Cardiovascular Surgical Intensive Care Program

At Kaiser Permanente Southern California, we believe our achievements are best measured by the health and wellness of the community we serve. That's why we provide a fully integrated system of care guided by values such as integrity, quality, service and, of course, results. If you would like to work with an organization that gives you the tools, resources and freedom you need to get the best outcomes possible for your patients, come to Kaiser Permanente.

CARDIAC INTENSIVIST - Los Angeles, CA

The Southern California Permanente Medical Group's Regional Department of Cardiac Surgery is the largest open heart surgery program in California. We are looking for qualified physicians to join an elite group of Intensivists to do the preoperative and postoperative care of cardiovascular surgical patients. Physicians who are board certified or board eligible in cardiac surgery, cardiology, or critical care from any discipline should apply.

The advantages of working with us reach far beyond our comprehensive network of support and state-of-the-art electronic medical records system. As part of our cross-specialty team, you'll also have access to a compensation and benefits package that's designed to impress you. And our surroundings are equally inspiring. Breathtaking natural beauty, year-round recreational amenities, an amazing climate and more will greet you when you arrive at Kaiser Permanente in Southern California.

As a fully integrated health care system, we are recognized nationally for our quality and information technology achievements. SCPMG, celebrating its sixtieth anniversary, offers an excellent salary, benefits and stability in today's rapidly changing health care environment. **For consideration, please forward your CV to Zorly Elterman at: Zorly.Elterman@kp.org, or call: (877) 608-0044.** We are an AAP/EEO employer.

THE CHRIST HOSPITAL HEALTH NETWORK CINCINNATI, OHIO

MEDICAL ONCOLOGIST

The Christ Hospital Health Network is seeking a full-time BC/BE medical oncologist to join our expanding oncology services in the Greater Cincinnati area. We are a compassionate, dedicated group committed to providing the highest quality care in the region. The candidate will be an outstanding, motivated clinician who will be able to work in a collaborative environment with a strong interest in clinical trial enrollment. Although the candidate is expected to care for all cancer types, a specialty interest is encouraged. The position will include a highly competitive compensation with a full benefits package, including relocation assistance.

THE CHRIST HOSPITAL HEALTH NETWORK ORGANIZATION: The Christ Hospital Health Network (TCHHN) is a regional system of care that extends The Christ Hospital's nearly 125 years of superior care and leadership to more than 100 locations in the Greater Cincinnati area. The Network delivers integrated, individualized healthcare and wellness services through its comprehensive physician network, advanced specialty services and the region's leading hospital, a 555-bed, not-for-profit acute care facility.

In 2013, The Christ Hospital placed three patient care programs among the nation's best in *U.S. News & World Report's* Best Hospitals 2013-14 rankings. The Christ Hospital is nationally ranked for Orthopaedics (29), Geriatrics (29) and Diabetes & Endocrinology (31). The report also ranks The Christ Hospital as the #1 hospital in the Cincinnati metro area and #4 in the state of Ohio, with high performing programs in cancer; cardiology & heart surgery; ear, nose and throat; gastroenterology & GI surgery; gynecology; nephrology; neurology & neurosurgery; pulmonology; and urology. This is the 14th consecutive year The Christ Hospital has been recognized among the nation's top 50 hospitals by *U.S. News*.

The Christ Hospital has also been recognized by National Research Corporation (NRC) for seventeen consecutive years as Cincinnati's *Most Preferred Hospital*, and in 2010 achieved Magnet® Status from the American Nurses Credentialing Center. The Christ Hospital has also been named one of the nation's *50 Top Cardiovascular Hospitals* by Truven Health Analytics, formerly Thomson Reuters.

Our physicians: The Christ Hospital medical staff includes many of the most well-renowned physicians in the Tri-state area. In fact, National Research Corporation (NRC) ranks them as the area's best. A number of our physicians are nationally and internationally acclaimed—for their contributions to patient care, teaching and research. The staff includes more than 1,000 physicians across dozens of specialties, including nearly 200 physicians who are employed by The Christ Hospital Health Network.

Executive Officer

The Institute of Medicine of the National Academies (IOM) seeks an Executive Officer. This is an exceptional opportunity for a dynamic and creative leader with strong managerial skills who is well versed in health policy, has experience with federal health programs, and seeks to make a positive impact on the public's health.

The mission of IOM is to serve as adviser to the nation to improve health. Working outside the framework of government, the IOM provides scientific, evidence-based information and advice to policy makers, professionals, the private sector, and the public.

The successful candidate will work closely with the IOM President and will provide intellectual, operational and financial leadership for IOM's programs and staff in accordance with the policy guidance of the IOM President.

This position requires an M.D., a Ph.D. in a related field, or equivalent knowledge relevant to this position, and 10 years of related professional experience, including 5 years in a supervisory capacity.

For more information about this challenging career opportunity and to apply, please visit our website at <http://national-academies.org> - click on [Careers](#) - select [Current Opportunities](#) - and search openings by [Department](#) - [Institute of Medicine](#).

Established in 1970 under the charter of the National Academy of Sciences, the Institute of Medicine provides independent, objective, evidence-based advice to policymakers, health professionals, the private sector, and the public. The National Academy of Sciences, National Academy of Engineering, Institute of Medicine, and National Research Council make up the National Academies. Headquartered in Washington, DC. EOE/M/F/D/V.

Chief, Medical Genetics Department of Genetics Yale University School of Medicine

The Department of Genetics at Yale University School of Medicine invites applications for the position of Chief of Medical Genetics. The new Chief will direct a comprehensive program including Medical Genetics for the Yale New Haven Health System, a strong research program, and residency training in Medical Genetics. There will be opportunity for additional recruitment. The successful candidate will have an established track record in clinical care, research and education and show exceptional promise for future leadership in the field. Faculty rank will be commensurate with experience.

The Section has primary responsibility for all aspects of Medical Genetics, including prenatal diagnosis, newborn screening, evaluation of children and adults with genetic syndromes, cardiac genetics and cancer genetics as well as cytogenetics and DNA diagnostics. The Section is based in the Department of Genetics, which comprises an exceptional faculty with a storied history in medical genetics as well as strong research in genetics and genomics of human disease, fundamental aspects of genetic and epigenetic regulation of gene expression and development, and deep expertise in model systems including flies, worms, fish and mice. In addition, the Yale Center for Genome Analysis, which is responsible for next generation DNA sequencing and is involved in human disease gene discovery, clinical diagnosis, and other basic research is under direction of members of the Department. The Section is closely allied with clinical care in Pediatrics, Maternal Fetal Medicine, Internal Medicine, Surgery and other clinical specialties.

Review of applications will begin immediately and continue until the position is filled. Curriculum vitae and a concise statement of clinical and research interests should be sent electronically to:

genetics.admin@yale.edu
to the attention of:
Richard Lifton, Chair, Department of Genetics

Yale University is an Equal Opportunity/Affirmative Action Employer and strongly encourages applications from women and minority candidates.

UNIVERSITY OF WASHINGTON

Head, Section of Cardiology, Harborview Medical Center

The Division of Cardiology, Department of Medicine at the University of Washington (UW) School of Medicine is recruiting a full-time Head of the Section of Cardiology based at Harborview Medical Center (HMC). The Cardiology Section at HMC is a full service program with integrated UW medicine and cardiovascular training programs. The successful candidate will have documented effective leadership experience with a strong commitment to patient care, medical education, and research. Evidence of publications; a proven record of collaboration in clinical, translational and health services research; and a demonstrated track record of mentoring fellows and junior faculty is required.

Applicants must have an M.D. degree (or foreign equivalent) and be board certified/eligible in cardiovascular diseases (or foreign equivalent). In order to be eligible for University sponsorship for an H-1B visa, graduates of foreign (non-US) medical schools must show successful completion of all three steps of the U.S. Medical Licensing Exam (USMLE), or equivalent as determined by the Secretary of Health and Human Services. The successful applicant must qualify for appointment to the full-time faculty at the University of Washington at the Associate Professor (without tenure due to funding) or Full Professor (without tenure due to funding) level commensurate with qualifications. University of Washington faculty engage in teaching, research and service. Position will remain open until filled.

The University of Washington is building a culturally diverse faculty and strongly encourages applications from women and minority candidates. The University of Washington is an Equal Opportunity/Affirmative Action employer.

Interested applicants should mail, fax or email your cover letter and CV to:

Elizabeth Cito, Manager
University of Washington, Division of Cardiology
Box 356422, 1959 NE Pacific St., Seattle WA 98195-6422

email: ecito@cardiology.washington.edu

CHAIR DEPARTMENT OF RHEUMATOLOGY

OCHSNER HEALTH SYSTEM in New Orleans is searching for a **CHAIR OF THE DEPARTMENT OF RHEUMATOLOGY**. The successful candidate will be a strong clinician with leadership and management abilities. This position will include 20% protected administrative/research time with the majority of Chairman's time spent in clinical activities. Salary offered will be competitive and commensurate with experience and training.

The department includes six physician members who practice all aspects of Rheumatology including musculoskeletal ultrasound. Teaching and mentoring opportunities include involvement with our medical students, medicine residents and four fellows in our two-year accredited fellowship training program.

Ochsner Health System is a physician-led, non-profit, academic, multi-specialty healthcare delivery system dedicated to patient care, research, and education. The system includes nine hospitals and more than 40 health centers throughout Southeast Louisiana. Ochsner employs over 900 physicians representing all major medical specialties and sub-specialties. We conduct over 300 ongoing clinical research trials annually. We also enjoy the advantage of practicing in a favorable malpractice environment in Louisiana. For additional information, please visit our website at www.ochsner.org.

Ochsner Health System and The University of Queensland Medical School in Brisbane, Australia began a unique, joint partnership in 2009 by opening the University of Queensland School of Medicine Clinical School at Ochsner, providing U.S. medical students with an unprecedented educational experience.

New Orleans is a cosmopolitan, historic city with unique architecture, world-class dining and cultural interests, and world-renowned live entertainment and music.

Please visit us during the ACR/ARHP 2013 Annual Meeting in San Diego on October 27-29, 2013, at Booth # 1000.

Chief, Section of Nephrology Department of Medicine University of Chicago

The Department of Medicine at the University of Chicago invites applications for the position of Chief, Section of Nephrology. The ideal candidate is an accomplished program builder with a strong background in all aspects of clinical nephrology, an experienced leader to support the Section's clinical, research and educational efforts, and has a national reputation in scholarship with independent grant funding.

The Section of Nephrology is comprised of 15 full-time faculty and ranked among the best nephrology programs in the country. The strength of the Section reflects the quality and dedication of its faculty, trainees and staff, and is enhanced by the rich environment at the University of Chicago. The clinical programs in the Section of Nephrology are diverse and comprise a number of sub-specialty areas including: end-stage renal disease, renal transplantation, acute renal failure, kidney stones, diabetic nephropathy, and immunological renal diseases. The faculty oversees three hemodialysis centers in the Hyde Park vicinity, as well as an active home dialysis program. The renal transplant program is very active, and provides a variety of options for renal transplantation. The Section, particularly in the areas of end-stage renal disease, transplantation and kidney stones, carries out a diversity of clinical research. Like our clinical activities, the basic science research is also diverse, and includes investigations into acute renal failure, epithelial cell transport and gene expression. The Chief will provide leadership, support and mentoring of faculty for an outstanding clinical and scholarly Section. To apply for this position, please submit a cover letter and CV to **Posting Number 01879** at the University of Chicago's Academic Career Opportunities website at:

https://academiccareers.uchicago.edu/applicants/jsp/shared/Welcome_css.jsp

Academic appointment will be at the rank of Associate or full Professor, commensurate with years of experience and accomplishment. Compensation includes an excellent benefits package. Applicants must be BC/BE in Nephrology and/or an international equivalent and be eligible for medical licensure in the State of IL.

*The University of Chicago is an Affirmative Action/
Equal Opportunity Employer.*

Dartmouth-Hitchcock Medical Center of the Dartmouth-Hitchcock system is located in Lebanon, NH on the Vermont/New Hampshire border and is New Hampshire's only integrated, academic, Level I trauma center. DEPARTMENT CHAIR HEMATOLOGY & ONCOLOGY

Ochsner Medical Center New Orleans is searching for a Chair of the Department of Hematology & Oncology. Applicants must be board certified in Hematology/Medical Oncology. Medical leadership and/or administrative experience is preferred. This position will include 20% protected administrative/research time with the majority of Chairman's time spent in clinical activities. The salary offered will be competitive and commensurate with experience and training.

The Hematology / Oncology Department is housed in the newly constructed Gayle and Tom Benson Cancer Center. The Chairman's role will be to lead 12 faculty members with a broad variety of clinical and research interests including a growing hematopoietic stem-cell transplant program.

Teaching opportunities include the Medical Oncology Fellowship Training Program as well as resident teaching for a large training program in Internal Medicine and involvement with 3rd and 4th year medical students of the Ochsner Clinical School of the University of Queensland.

Clinical research activities are supported through the Ochsner Cancer Institute which houses the National Cancer Institute-funded Community Clinical Oncology Program (CCOP). The CCOP provides the necessary infrastructure and support to offer the latest clinical trials to our cancer patients, available through cooperative groups such as ECOG, NSABP, NCCTG, & RTOG, as well as investigator-initiated and pharmaceutical sponsored trials. A Clinical Trials Unit for Early Phase studies is available and there is a strong collaboration with the LSU Cancer Center for translational research.

Ochsner Health System is a physician-led, non-profit, academic, multi-specialty healthcare delivery system dedicated to patient care, research, and education. Our mission is to Serve, Heal, Lead, Educate, and Innovate. The system includes 9 hospitals and over 40 health centers throughout Southeast Louisiana. Ochsner employs over 900 physicians representing all major medical specialties and sub-specialties. We conduct over 300 ongoing clinical research trials annually. We also enjoy the advantage of practicing in a favorable malpractice environment in Louisiana. For additional information, please visit our website, www.ochsner.org.

New Orleans amenities include multiple medical schools and academic centers, professional sports teams, world-class dining and cultural interests, and world-renowned live entertainment and music.

Interested physicians should email CV to profrecruiting@ochsner.org for review by Christopher J. White, M.D., Search Committee Chair. Call for information: (800) 488-2240. Ref. #ADCHO2.

VICE CHAIR FOR EDUCATION BRIGHAM AND WOMEN'S HOSPITAL DEPARTMENT OF RADIOLOGY

The Department of Radiology at Brigham and Women's Hospital and Harvard Medical School seeks to recruit a Vice Chair for Education. This newly-established position has been created in order to integrate, harmonize and simplify the wide range of departmental educational activities. These activities currently range from education of medical students, through residents/fellows, and practicing radiologists, as well as professionals in radiologic technology and medical physics.

Successful candidates will have a solid record of experience and innovation in medical education.

An M.D. or equivalent degree, as well as substantial experience in Radiology education is required. Academic rank will be commensurate with experience, but we expect this appointment to be at the Associate Professor level.

Interested candidates should send a letter of interest and a CV to:

**BWH Radiology Vice Chair for Education
Search Committee Chair
C/o Suzanne E Nagle
Department of Radiology
Brigham and Women's Hospital
75 Francis Street, Suite OBC-3-010
Boston, MA 02115
Fax: 617-525-7533
Email: snagle@partners.org**

Brigham and Women's Hospital and Harvard Medical School are Equal Opportunity/Affirmative Action employers. Women and under-represented minority individuals are encouraged to apply

Chief of Critical Care

The Department of Critical Care Medicine at the University of Pittsburgh Medical Center is actively seeking a Critical Care Chief to provide leadership at UPMC-Hamot. The Chief will oversee the 24x7 management of a 45 bed ICU service providing care to medical, surgical, trauma, cardiac and neurosurgical patients. An ideal candidate will have excellent communication and organizational skills and a record of accomplishment in clinical care and administration. Responsibilities will include providing administrative leadership for clinical operations and quality improvement. The candidate will be expected to take a significant role as a physician leader in this supportive institution. Salary will be commensurate with experience and training.

UPMC Hamot, located in Erie, PA, is a 412-bed non-profit tertiary care hospital and a fully accredited Level II Trauma Center. UPMC Hamot is consistently an award winning hospital, most notably being recognized nationally by Thomson Reuters and US News & World. For several years the National Research Corporation found UPMC Hamot to be the number one choice for healthcare in the Erie community. These acknowledgments speak volumes about the high quality care we deliver every day. The Medical Staff has over 400 physicians representing most specialties and subspecialties and we have residency training programs in Orthopaedic Surgery, Neurology and Emergency Medicine.

As the fourth largest city in Pennsylvania, Erie has an abundance of resources in culture, recreation and education. Erie and UPMC Hamot overlook Presque Isle Bay and Peninsula. Lake Erie offers the perfect setting for boating, water skiing, scuba diving, wind surfing, sailing and fishing. Close proximity to the Allegheny Mountains affords easy access to Alpine and Nordic skiing. Cultural offerings include a nationally recognized symphony orchestra, ballet and dance companies, playhouse theatre groups and the Presque Isle Downs and Casino. Erie is also home to professional baseball, basketball and ice hockey teams. For children Erie offers a planetarium, the Erie Zoo, a Children's Museum, community parks, an amusement park, and indoor and outdoor water parks. Erie has a selection of excellent public, private and parochial schools, as well as four local colleges and universities. To learn more go to www.visiteriepa.com.

Interested applicants should submit a current CV and the names and addresses of three references to:

Arthur J Boujoukos, M.D., Clinical Vice Chair
Department of Critical Care Medicine
Suite 616 Scaife Hall, 3550 Terrace Street
Pittsburgh, PA 15261

Fax: 412-647-8060, E-mail: Boujoukosaj@upmc.edu

Lahey Hospital & Medical Center

Lahey Health

Lahey Primary Group Practice Opportunities

Danvers Internal Medicine

The Lahey Danvers practice seeks a highly motivated BC/BE physician leader to join this established Internal Medicine practice. The practice currently consists of three Internal Medicine Physicians, three Pediatricians and two Nurse Practitioners. Call is shared with eight physicians within the Beverly, Danvers and Ipswich group. Patients are admitted locally within the Lahey Health System utilizing the 24/7 hospitalist services.

Located 20 minutes north of Boston the practice has provided care in their community for more than 30 years. The providers have developed a strong relationship with patients and families in Danvers as well as the surrounding communities of Beverly, Ipswich and Manchester-by-the-Sea.

Merrimac Family Practice

We are seeking a BC/BE Family Practitioner to join the Lahey Merrimac practice located north of Boston practice serving community for more than 15 years. You will join one physician and one nurse practitioner providing care to a culturally diverse patient population from the Merrimac area and surrounding communities. The physicians share light call coverage within the Lahey Amesbury, Merrimac and Haverhill group. Patients are admitted locally and within the Lahey Health system using the Hospitalist model.

On the New Hampshire border, Merrimac is a well-established suburban community practice located 45 minutes north of Boston close to the mountains and seacoast; providing cultural and recreational opportunities throughout the year.

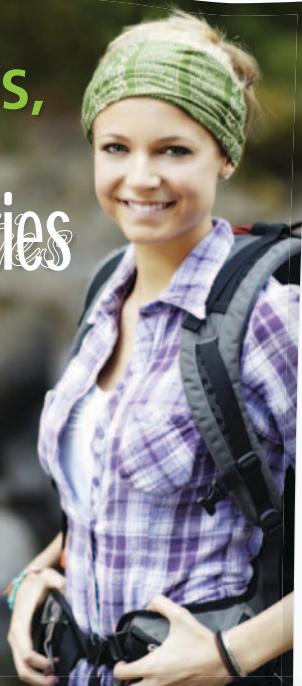

Hamilton-Wenham Family Practice

Lahey Hamilton Wenham Family Practice has served the community for over thirty years. You will join three physicians and two nurse practitioners providing care to adult and pediatric patients within the communities we serve. Call is shared among the Hamilton and Lynnfield practices. Using their Hospitalist services, patients are admitted within the Lahey Health system. Located 30 minutes north of Boston, with an excellent school system, Hamilton is within minutes of the seacoast and offers abundant cultural and recreational activities for every season.

Lahey Hospital & Medical Center is comprised of medical centers in Burlington, Lexington, and Peabody, MA., as well as more than a dozen community primary care and satellite specialty care locations throughout northeastern Massachusetts and southern New Hampshire.
