The NEW ENGLAND JOURNAL of MEDICINE

EDITORIAL OFFICES

September 12, 2013

Dear Physician:

As a young physician at the beginning of your career, I'm sure making decisions about your future is a top priority for you. The *New England Journal of Medicine* (NEJM) is the leading source of information on physician job openings in the country. Because we want to assist you in this important search, a complimentary copy of the 2013 *Specialty Delivery* booklet is enclosed. This special booklet contains a reprint of the classified advertising section from the September 12 issue of NEJM.

The NEJM CareerCenter website (NEJMCareerCenter.org) continues to receive positive feedback from physician users. Because the site was designed specifically based on advice from your colleagues, physicians are comfortable using it for their job searches and welcome the confidentiality safeguards that keep personal information and job searches private. Physicians have the ability to search for *locum tenens* jobs, giving physicians the flexibility of looking for both permanent and *locum tenens* positions in their chosen specialties and desired geographic locations.

At NEJM CareerCenter, you'll also find:

- Hundreds of quality, current job openings — not jobs that were filled months ago
- Email alerts that automatically notify you about new opportunities
- An iPhone app that allows you to easily search and apply for jobs directly from your phone
- Sophisticated search capabilities to help you pinpoint jobs that match your search criteria
- A comprehensive resource center with career-focused articles and job-seeking tips

If you are not currently an NEJM subscriber, I invite you to become one. We have recently made many exciting enhancements that further increase our publication's relevance to you as you move forward in your career, including our new Critical Care review series.

A reprint of the August 8, 2013, article "Clinical Practice: Mild Asthma" is also included in this special booklet. Our popular Clinical Practice articles offer evidence-based reviews of topics relevant to practicing physicians. Expanding upon this series, we created Clinical Therapeutics — review articles that focus on a specific therapy (e.g., medication, device, or procedure) for a given clinical problem.

NEJM.org offers an interactive and personalized experience, including specialty pages and alerts and access to multimedia features like Videos in Clinical Medicine, which allow you to watch common clinical procedures, and Interactive Medical Cases, which allow you to virtually manage an actual patient's case from presentation to outcome. Take a Case Challenge, which allows you to read the full case description of an upcoming Case Record of the Massachusetts General Hospital and vote on the diagnosis, and view the most recent Quick Take, an animated overview of a study on CT screening for lung cancer published last week. You can learn more about these features at NEJM.org.

A career in medicine is exciting and challenging; current practice leaves little time for keeping up with changes. With this in mind, we have developed these enhancements to bring you the best, most relevant information in a practical and clinically useful format each week.

On behalf of the entire *New England Journal of Medicine* staff, please accept my wishes for a rewarding career.

Sincerely,

Jeffrey M. Drazen, MD

CLINICAL PRACTICE

Caren G. Solomon, M.D., M.P.H., *Editor*

Mild Asthma

Elisabeth H. Bel, M.D., Ph.D.

This Journal feature begins with a case vignette highlighting a common clinical problem. Evidence supporting various strategies is then presented, followed by a review of formal guidelines, when they exist. The article ends with the author's clinical recommendations.

A 20-year-old college student with a history of asthma and allergic rhinitis, which were diagnosed in childhood, presents with cough and tightness of the chest that interfere with his sleep three or four times per month. He requires albuterol two or three times per week. He enjoys playing tennis but generally wheezes after a match. Last year, during the pollen season, he sought treatment in an emergency department for acute asthma but was not admitted to the hospital. His forced expiratory volume in 1 second (FEV₁) is 93% of the predicted value. How should this case be evaluated and managed?

THE CLINICAL PROBLEM

Asthma is a chronic inflammatory disease of the airways that is characterized by variable narrowing of the airways and symptoms of intermittent dyspnea, wheezing, and nighttime or early-morning coughing. Asthma is a major health problem throughout the world, affecting an estimated 315 million persons of all ages.¹ The prevalence of asthma varies widely among countries, ranging from 2% in Vietnam to 27% in Australia.¹ Asthma occurs more frequently in adults than in children and more frequently in boys than in girls; however, after the teenage years, asthma occurs more frequently in women than in men.²

Asthma is clinically heterogeneous, and its pathophysiology is complex.³ Airway eosinophilic inflammation is typical, but many patients with mild asthma have persistently noneosinophilic disease.⁴ Airway hyperresponsiveness is a consistent feature; irreversible airflow obstruction develops in some patients, presumably as a consequence of remodeling of the airway wall.³ Short periods of loss of asthma control may occur as a result of exposure to nonspecific “triggers,” such as fumes, strong smells, or exercise. Moderate or severe exacerbations are usually due to exposure to allergens or viruses, particularly human rhinovirus.⁵

The development of asthma in children is influenced by genetic predisposition as well as by environmental factors, including viral infection and sensitization to aeroallergens (e.g., house dust mites or animal dander).⁶ Altered repair responses of the airway epithelium to these insults lead to inflamed airways, altered smooth-muscle function, and increased production of mucus.³ Persons who are born and raised on a farm have a reduced risk of allergy and asthma, probably because they have been exposed to a wide variety of microorganisms.⁷ Risk factors for the development of asthma in middle-aged and older adults are diverse and include work-related exposures (e.g., isocyanates or cleaning products) and lifestyle factors (e.g., smoking or obesity).^{8,9}

NATURAL HISTORY

The natural history of asthma varies considerably according to the age of the patient at the first onset of symptoms, the severity of the asthma, and the patient's

KEY CLINICAL POINTS

CONTROL OF ASTHMA

- Most patients with asthma have mild, persistent disease, which tends to be underdiagnosed, undertreated, and inadequately controlled.
- The diagnosis of asthma is based on the presence of symptoms of dyspnea, cough, and wheezing and objective confirmation of variable airflow limitation that is at least partially reversible.
- For mild, persistent asthma, regular controller treatment with low-dose inhaled glucocorticoids and rescue treatment with short-acting beta₂-agonists, as needed, is recommended as the initial treatment.
- If asthma control is not achieved within 3 to 4 months, maintenance treatment should be stepped up with the addition of a second controller medication (long-acting beta₂-agonist or leukotriene modifier) or with an increase in the dose of inhaled glucocorticoids.
- Ongoing patient education, written action plans, and regular follow-up visits to reassess asthma control and adjust therapy are integral to successful management.

sex.⁸ Mild asthma in children rarely progresses to severe disease, but severe and frequent wheezing is a well-established risk factor for persistence and severity of the disease in adulthood. Boys with asthma are more likely to “grow out” of their asthma, whereas asthma in girls is more likely to persist. Irreversible airflow limitation develops in some patients, particularly in those who have severe exacerbations.¹⁰

SEVERITY AND CONTROL OF ASTHMA

The clinical spectrum of asthma ranges from mild, intermittent symptoms to severe, refractory disease with frequent exacerbations, but the majority of patients with asthma have mild disease.¹¹ Without treatment, these patients have symptoms less than once a day, nighttime sleep disturbances less than once a week, sporadic exacerbations requiring treatment with oral glucocorticoids, and normal lung function between asthma episodes.^{12,13} Because many patients with mild asthma do not seek care for their symptoms, mild asthma tends to be underdiagnosed, undertreated, and inadequately controlled.¹⁴

International expert panels have agreed that achievement and maintenance of good control should be the cornerstone of asthma management.^{12,13} Asthma control involves the control of symptoms and functional impairments, as well as the reduction of the risk of future adverse events (e.g., asthma exacerbations, adverse effects of medications, and decline in lung function).¹⁵ A classification of asthma severity that is based on

the intensity of the treatment required to achieve good asthma control has been proposed,¹⁶ although it has not been universally accepted.¹³ According to this classification, “mild” asthma refers to asthma that can be well controlled with low-intensity treatment, regardless of the severity of symptoms and airflow obstruction at presentation.

STRATEGIES AND EVIDENCE

EVALUATION

The diagnosis of asthma is based on the presence of typical symptoms and on objective confirmation of variable airflow limitation that is at least partially reversible.^{12,13} The assessment includes a detailed history and physical examination. Wheezing on auscultation suggests asthma, but that finding may be absent during quiet respiration or may be audible only during forced expiration or after exercise. Spirometry or measurement of peak expiratory flow provides an assessment of the severity of airflow limitation, its variability, and its reversibility (Table 1).^{12,13} For patients with normal lung function, a negative bronchoprovocation test with inhaled methacholine or a negative test during exercise may be useful for ruling out asthma. Skin testing or *in vitro* testing is recommended to identify indoor allergens that may contribute to asthma symptoms in patients with relevant exposures.

Once a diagnosis of asthma is made, the level of asthma control should be assessed. Standard-

ized assessments such as the Asthma Control Questionnaire and the Asthma Control Test (see Figure S1 in the Supplementary Appendix, available with the full text of this article at NEJM.org) have been shown to be valid and reliable tools in clinical practice for distinguishing between asthma that is well controlled and asthma that is not well controlled.¹⁷

PATIENT EDUCATION

Patients and health care professionals should discuss and agree on the goals of treatment and develop an individualized action plan. A review of randomized trials of written action plans showed that plans that based the action point on the patient's personal best peak expiratory flow (e.g., action taken when a 15% to 30% decrement is noted), and that included instructions for recognizing early signs of worsening asthma and taking action in case of an exacerbation (including recommendations for the use of inhaled and oral glucocorticoid therapy), resulted in reduced hospitalizations for asthma.¹⁸ Ongoing patient education and regularly scheduled follow-up visits to reassess asthma control, adjust therapy, and promote adherence to medication are crucial for long-term success.

AVOIDANCE OF TRIGGERS

Relevant triggers that have been shown to aggravate asthma should be addressed and removed if possible. Exposure to aeroallergens has been convincingly shown to worsen asthma control in sensitized patients,¹⁹ but there is conflicting evidence about whether measures to reduce exposure to dust mites and pet dander, the most common indoor allergen sources, lead to better asthma outcomes. Randomized trials of single chemical or physical methods that are aimed at reducing dust-mite allergens, for example, have shown no significant effect on asthma symptoms.²⁰ In addition, the clinical effectiveness of removing pets from the home remains unproven. However, multicomponent home-based interventions that target multiple triggers have been shown to reduce asthma symptoms and asthma-related utilization of health care resources.²¹

Exposure to tobacco smoke increases the severity of asthma in children and adolescents,²² and active smoking reduces the response to asthma medication²³ and causes long-term impairment of lung function.²⁴ Smoke-free policies have been

Table 1. Criteria for the Diagnosis of Asthma.*

Presence of episodic symptoms of airflow obstruction or airway hyperresponsiveness
Objective assessment consisting of one of the following
Airflow obstruction that is at least partially reversible with the use of an inhaled short-acting beta ₂ -agonist, as shown by one of three variables
An increase in FEV ₁ of ≥12% from baseline
An increase in predicted FEV ₁ of ≥10 percentage points from baseline
An increase in PEF of ≥20% (or 60 liters/min) from baseline
Diurnal variation in PEF (measured twice daily) of more than 10%

* FEV₁ denotes forced expiratory volume in 1 second, and PEF peak expiratory flow.

associated with a reduction in emergency hospitalizations for asthma.²⁵ Smoking cessation is therefore strongly recommended for all patients with asthma and their caregivers who smoke.

Coexisting conditions such as rhinitis and obesity may aggravate asthma symptoms, and treatment of these conditions in patients with asthma reduces asthma symptoms and improves lung function.²⁶ Gastroesophageal reflux is also common in patients with uncontrolled asthma; however, in a large, randomized, controlled trial, treatment with proton-pump inhibitors did not result in better asthma control.²⁷

ASTHMA MEDICATIONS

The goal of asthma treatment is to achieve long-term clinical control while minimizing the side effects of treatment. Current guidelines recommend a stepwise approach to pharmacologic treatment,^{12,13} in which treatment is initiated and adjusted (higher or lower) on the basis of ongoing assessments of the patient's level of asthma control (Fig. 1).

Asthma medications are classified into two categories: medications for long-term control, which are taken on a regular basis to achieve and maintain control of persistent asthma, and quick-relief medications that are used infrequently, when needed, to treat acute symptoms and exacerbations. Most asthma medications are administered through an inhaler, either a metered-dose inhaler with a spacer or a dry-powder inhaler.

For patients with mild, persistent asthma who

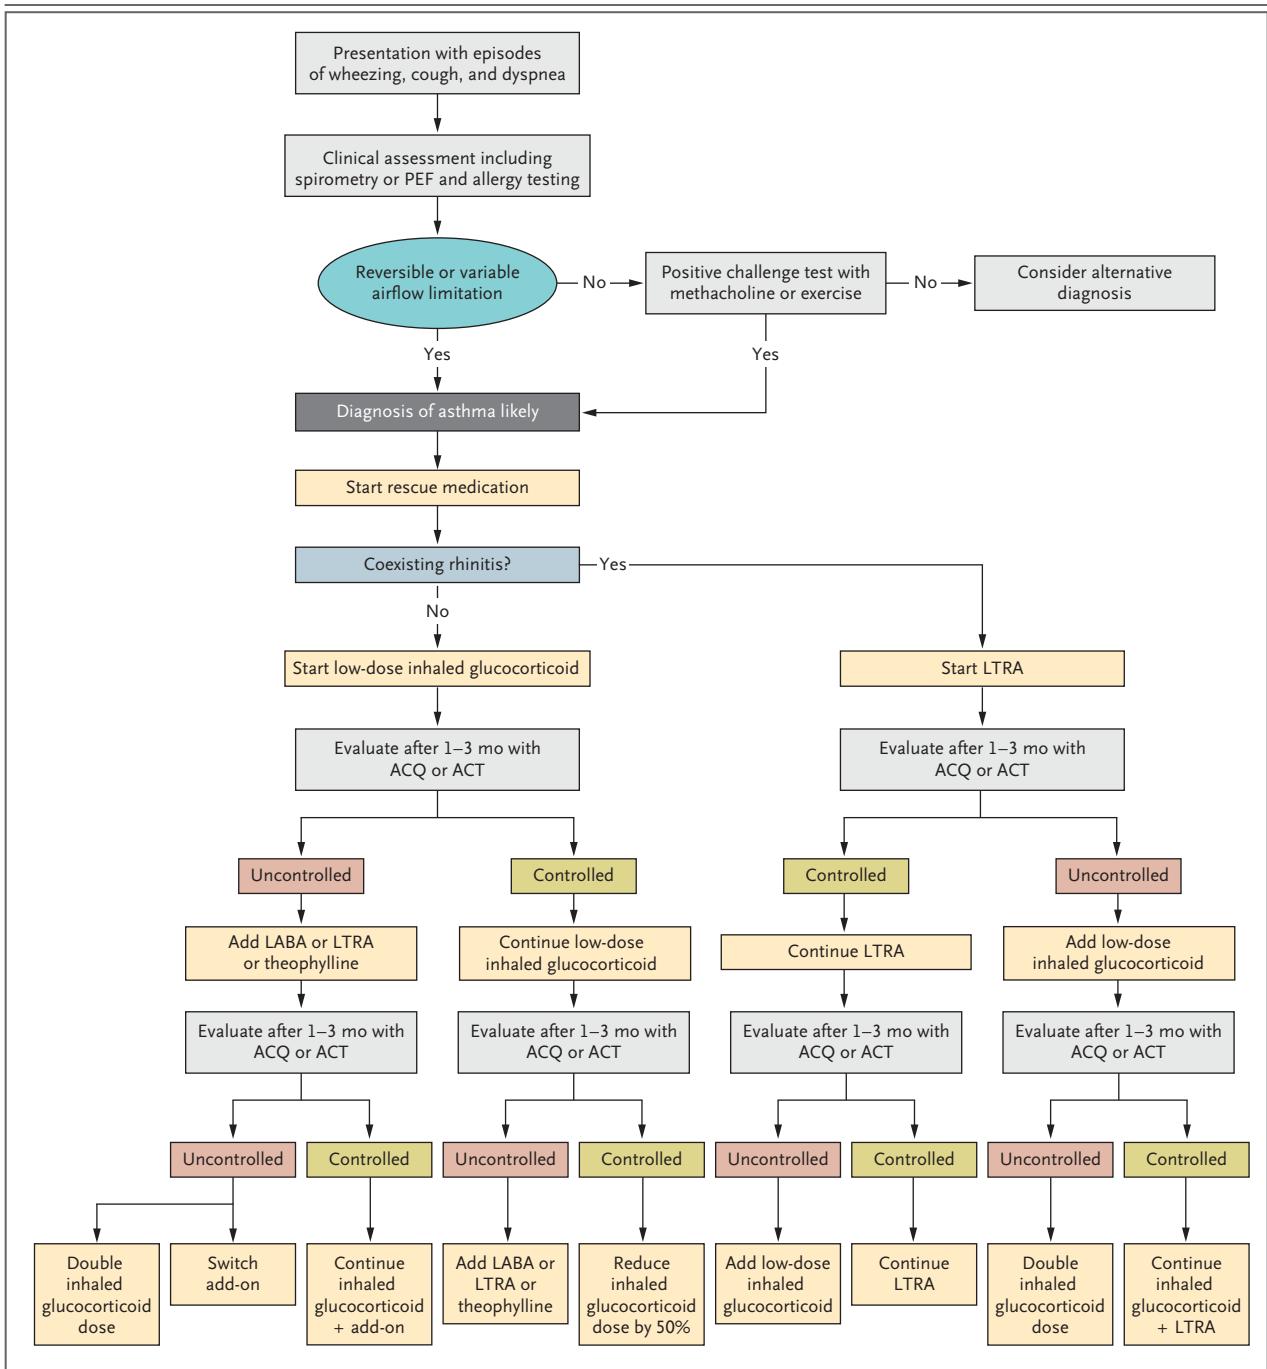

Figure 1. Algorithm for the Treatment of Mild Asthma in Adults and Children Older Than 5 Years of Age.

This algorithm is based largely on guidelines from the Global Initiative for Asthma¹² and the National Asthma Education and Prevention Program of the National Heart, Lung, and Blood Institute.¹³ ACQ denotes Asthma Control Questionnaire, ACT Asthma Control Test, LABA long-acting beta₂-agonist, LTRA leukotriene-receptor antagonist, and PEF peak expiratory flow.

have not received previous treatment, current guidelines recommend as the initial treatment a regular controller medication with a rescue medication as needed (Table 2). Rapid-acting inhaled beta₂-agonists are the rescue medications of choice and should be taken as needed to reverse bronchoconstriction and relieve symptoms.²⁸ Although short-acting inhaled anticholinergic agents

Table 2. Controller and Rescue Medications for the Treatment of Mild Asthma.*

Indication and Drug	Children 6–11 Yr		Children ≥12 Yr and Adults		Side Effects
	Initial Daily Dose	Maximum Step-up Dose	Initial Daily Dose	Maximum Step-up Dose	
Medications for quick relief					
Short-acting beta ₂ -agonists†					
Albuterol	200 µg, as needed	200 µg, six times a day‡	200 µg, as needed	200 µg, six times a day‡	Tachycardia, tremor, cough, headache
Terbutaline§	—	—	250 µg, as needed	500 µg, eight times a day‡	
Anticholinergic agent: ipratropium bromide¶					
	40 µg, as needed	40 µg, four times a day	40 µg, as needed	40 µg, six times a day	Dry mouth, headache, nausea
Medications for long-term control					
Inhaled glucocorticoids†					
Beclomethasone	50 µg, twice a day	200 µg, twice a day	50 µg, twice a day	200 µg, twice a day	Hoarseness, oral candidiasis, growth retardation (approximately 1 cm), glaucoma, agitation, hypersensitivity
Budesonide	100 µg, once a day	200 µg, twice a day	100 µg, twice a day	400 µg, twice a day	
Fluticasone	50 µg, twice a day	250 µg, twice a day	50 µg, twice a day	250 µg, twice a day	
Ciclesonide	—	—	80 µg, once a day	160 µg, twice a day	
Leukotriene modifier: oral montelukast					
	5 mg, once a day	5 mg, once a day	5 mg, once a day	10 mg, once a day	Sinusitis, abdominal pain, headache
Cromones					
Sodium cromoglycate					
	5 mg, four times a day	10 mg, four times a day	10 mg, four times a day	10 mg, eight times a day	Cough, bronchospasm
Nedocromil sodium					
	2 mg, four times a day	4 mg, four times a day	2 mg, four times a day	4 mg, four times a day	Headache, nausea
Step-up or add-on medications					
Long-acting beta ₂ -agonists†					
Salmeterol	—	50 µg, twice a day	—	50 µg, twice a day	Tachycardia, tremor, headache, asthma exacerbations
Formoterol	—	12 µg, twice a day	—	24 µg, twice a day	
Oral theophylline					
	—	10 mg/kg, twice a day	—	5 mg/kg, twice a day	Reflux, headache, insomnia, tremor, tachycardia

* All drug doses are approximate doses and apply to metered-dose inhalers unless specified otherwise.

† This is a preferred therapy.

‡ Daily use of rescue medication is a warning of deterioration of asthma control and indicates the need to reassess treatment.

§ Terbutaline Turbuhaler is not available in the United States.

¶ Anticholinergic agents can be used as second-line therapy after therapy with short-acting beta₂-agonists but do not have approval by the Food and Drug Administration for use in treatment of asthma. However, in many European countries, ipratropium bromide is approved for the treatment of asthma.

|| Montelukast can also be used as a step-up medication with inhaled glucocorticoids. Pranlukast or zafirlukast can be substituted for montelukast in adults; doses vary according to medication type.

are not approved by the Food and Drug Administration (FDA) for this indication, they may be used as alternative, albeit less effective, bronchodilators in patients who have unacceptable side effects with beta₂-agonists.^{12,13} (Ipratropium bromide, a commonly used anticholinergic agent, has never been considered for centralized approval by the European Medicines Agency; however, it is approved for the treatment of asthma in many European countries.)

For the long-term control of asthma, inhaled glucocorticoids are the most potent and consistently effective medications for achieving overall treatment goals.²⁹ These drugs are therefore the preferred therapy for patients with persistent asthma, including those who have generally well-controlled asthma but have had two or more asthma exacerbations requiring oral glucocorticoid therapy in the previous year.^{12,13} Constant low-dose inhaled glucocorticoid therapy^{12,13} has been shown in randomized, placebo-controlled trials to reduce asthma symptoms, improve asthma control and quality of life, improve lung function, diminish airway hyperresponsiveness, control airway inflammation, and reduce the frequency and severity of exacerbations.^{29,30} A large, nested, case-control study showed that persons who regularly used low-dose inhaled glucocorticoids had a reduced risk of death from asthma.³¹ Current evidence does not support the assumption that in children, early intervention with an inhaled glucocorticoid may alter the underlying severity or progression of the disease.³² Inhaled glucocorticoids do not cure asthma, and when they are discontinued, asthma control deteriorates in weeks to months in roughly half the patients.³³

Inhaled glucocorticoids at low doses, even when taken for extended periods of time, are generally considered to be safe.³⁴ Local side effects include dysphonia and oral candidiasis, which may be reduced by rinsing the mouth and spitting after inhalation, using a spacer device, or using extra-fine particle formulations that reduce oropharyngeal deposition.³⁵ Inhaled glucocorticoids are absorbed from the lung into the bloodstream and may cause systemic side effects in susceptible patients; a follow-up assessment of children who were enrolled in a placebo-controlled, randomized trial of inhaled glucocorticoid treatment showed a decrement of 1.2 cm, on average, in final height with long-term treatment.³⁶

These medications should be adjusted to the lowest dose that is effective in maintaining good asthma control (see Table S1 in the Supplementary Appendix).

Over the past few years, the importance of regular glucocorticoid treatment for patients with mild asthma, as suggested by asthma treatment guidelines, has been challenged. A randomized, controlled trial involving adults suggested that intermittent short courses of inhaled glucocorticoids at the onset of asthma exacerbations have effects similar to those obtained with the regular use of inhaled glucocorticoids with respect to various measures of asthma control. However, not all drugs were similar, and some provided more improvement with daily therapy.³⁷ A recent meta-analysis of four trials involving pediatric patients and two trials involving adult patients showed that daily use of inhaled glucocorticoids is modestly superior to intermittent use with respect to good asthma control, reduction in airway inflammation, improvement in lung function, and reduction in the need for rescue medication.³⁴ Physicians and patients should consider the risks and benefits of each treatment option.

Leukotriene modifiers are alternative medications for the long-term control of asthma.³⁸ These drugs are particularly appropriate for patients who have concomitant allergic rhinitis³⁹ or who have unacceptable local side effects with inhaled glucocorticoid therapy or an inadequate response to inhaled glucocorticoids.⁴⁰ Large, randomized trials comparing leukotriene-modifier therapy with low-dose inhaled glucocorticoids in adults and children with mild, persistent asthma have shown that as compared with leukotriene-modifier therapy, inhaled glucocorticoid therapy results in significantly greater improvements with respect to most measures of asthma control.⁴¹ However, two large pragmatic trials performed in community settings showed that leukotriene-receptor antagonists were similar in efficacy to inhaled glucocorticoids as first-line controller therapy.⁴²

Other options such as theophylline and cromones (nedocromil sodium and sodium cromoglycate) are available, but these drugs are less effective than inhaled glucocorticoids or leukotriene modifiers as initial controller medications for mild, persistent asthma and are therefore not preferred therapies.^{12,13}

SPECIFIC IMMUNOTHERAPY

Although specific immunotherapy has been shown to be effective in reducing asthma symptoms and airway hyperresponsiveness in patients with a single, well-defined, clinically relevant allergy,⁴³ the effect of this approach as compared with other treatment options is relatively modest. Specific immunotherapy should therefore be considered only when there is a substantial allergic contribution to a patient's symptoms, and pharmacologic intervention and avoidance of environmental allergens have failed to control the asthma.^{12,13}

MONITORING AND ADJUSTMENT OF THERAPY

Once asthma control has been achieved, ongoing monitoring is essential to maintain control and to establish the lowest effective dose of treatment. Inhaler technique should be reviewed regularly (see the video in Hendeles et al.,⁴⁴ also available with this article, at NEJM.org), and patients should be queried regarding side effects of the medication. Avoidance of triggers and adherence to the medication should be discussed routinely. If the monitoring of peak expiratory flow is included in the written asthma action plan, the patient's personal best peak expiratory flow should be used as the reference value.¹⁸

In case of an anticipated brief loss of control (e.g., due to short-term exposure to an allergen), quadrupling the dose of inhaled glucocorticoids for 5 to 10 days might be an effective strategy for preventing progression to a severe exacerbation.³⁷ If lack of control persists for prolonged periods of time (2 to 3 weeks), maintenance treatment should be stepped up with the addition of a second controller medication (a long-acting beta₂-agonist or a leukotriene modifier) or with an increase in the dose of inhaled glucocorticoids.⁴⁵ Randomized, controlled trials have shown that in adults, the addition of a long-acting bronchodilator to inhaled glucocorticoids leads to greater improvement in lung function and quality of life than the addition of a leukotriene-receptor antagonist.⁴⁶ However, large, randomized, double-blind clinical trials have suggested that long-acting bronchodilators may be associated with increased risks of serious asthma exacerbations and asthma-related deaths.⁴⁷ Therefore, the FDA now advises against using long-acting beta-agonists in patients whose asthma is adequately controlled with low-dose or medium-dose inhaled glucocorticoids.⁴⁸ In

addition, some patients have a better response to the addition of a leukotriene-receptor antagonist.⁴⁶

AREAS OF UNCERTAINTY

Single-inhaler combination therapy, consisting of an inhaled glucocorticoid and a long-acting beta₂-agonist, is increasingly being used for the treatment of patients with moderate asthma.⁴⁹ Whether this strategy is effective and safe in patients with mild asthma remains to be investigated.

When adequate control of asthma is maintained at a low dose of inhaled glucocorticoids for 3 to 4 months, guidelines recommend stepping down therapy. Proposed step-down strategies include a switch to intermittent use of inhaled glucocorticoids,³³ regular use of a leukotriene-receptor antagonist, or once-daily single-inhaler combination therapy with a glucocorticoid and a long-acting beta₂-agonist.⁵⁰ However, the most appropriate step-down strategy remains uncertain.

Better strategies are needed for diagnosing and classifying asthma and for guiding asthma treatment. The use of biomarkers such as sputum eosinophil counts and exhaled nitric oxide levels has been suggested to aid in the assessment of asthma control, but the role of these biomarkers in clinical practice remains uncertain.⁵¹

Severe asthma exacerbations can occur even in patients with mild asthma that is well controlled,⁵ with the exacerbations most often provoked by viral infections. Since inhaled glucocorticoids do not fully regulate virus-associated exacerbations, other (preventive) strategies are needed.⁵

GUIDELINES

The Global Initiative for Asthma (GINA)¹² and the National Asthma Education and Prevention Program (NAEPP) of the National Heart, Lung, and Blood Institute,¹³ among other groups, have published guidelines on the evaluation and management of asthma. The recommendations in this review are generally consistent with the GINA and NAEPP guidelines.

CONCLUSIONS AND RECOMMENDATIONS

The patient described in the vignette has symptoms indicative of mild, persistent asthma. The

A video showing the use of an albuterol metered-dose inhaler is available at NEJM.org

frequency of daytime and nighttime symptoms and impairment with exercise suggest inadequate control. Before initiating daily controller treatment, I would confirm the diagnosis of asthma by means of spirometry or, in the absence of reversibility, by means of a challenge test with inhaled methacholine. I would also evaluate the patient's sensitization and exposure to allergens and educate him regarding strategies for good control of asthma, including a written action plan. In accordance with current guidelines, I would initiate treatment with regular low-dose inhaled glucocorticoids and a short-acting beta₂-agonist as needed for rescue use. If after 3 to 4 months the response to treatment is unsatisfactory (as assessed with the use of a questionnaire such as

the Asthma Control Test), I would increase the dose of inhaled glucocorticoids or add a second controller medication. Long-acting beta₂-agonists are the preferred therapy to add, but given his atopy and exercise-induced symptoms, a leukotriene-receptor antagonist would be a good alternative. If, however, he has a good response to low-dose inhaled glucocorticoids at follow-up, I would reduce the dose of inhaled glucocorticoids to the lowest possible dose required to maintain asthma control.

Classified Advertising Rates

We charge \$7.50 per word per insertion. **Bold typeface** is available for \$7.80 per word per insertion (**entire ad must be bold typeface**). A 2- to 4-time frequency discount rate of \$6.00 per word per insertion and \$6.80 per word per insertion for **bold typeface** is available. A 5-time frequency discount rate of \$5.85 per word per insertion and \$6.10 per word per insertion for **bold typeface** is also available. In order to earn the 2- to 4-time or 5-time discounted word rate, the request for an ad to run in multiple issues must be made upon initial placement. The issues do not need to be consecutive. **Web fee:** Classified line advertisers may choose to have their ads placed on NEJM CareerCenter for a fee of \$65.00 per issue per advertisement. The web fee must be purchased for all dates of the print schedule. The choice to place your ad online must be made at the same time the print ad is scheduled. **Note:** The minimum charge for all types of line advertising is equivalent to 25 words per ad. Confidential reply boxes are an extra \$75.00 per insertion plus 4 words (Reply Box 0000, NEJM). We will send the responses directly to you every Tuesday and Thursday. Purchase orders will be accepted subject to credit approval. For orders requiring prepayment, we accept payment via Visa, MasterCard, and American Express for your convenience, or a check. All classified line ads are subject to the consistency guidelines of NEJM.

How to Advertise

All orders, cancellations, and changes must be received in writing. E-mail your advertisement to us at ads@nejmcareercenter.org, or fax it to 1-781-895-1045 or 1-781-893-5003. We will contact you to confirm your order. Our closing date is typically the Friday 20 days prior to publication date; however, please consult the rate card online at nejmcareercenter.org or contact the Classified Advertising Department

at 1-800-635-6991. Be sure to tell us the classification heading you would like your ad to appear under (see listings above). If no classification is offered, we will determine the most appropriate classification. Cancellations must be made 20 days prior to publication date. Send all advertisements to the address listed below.

Website: nejmcareercenter.org

How to Calculate the Cost of Your Ad

We define a word as one or more letters bound by spaces. Following are some typical examples:

Bradley S. Smith III, MD.....	= 5 words
Send CV	= 2 words
December 10, 2007	= 3 words
617-555-1234	= 1 word
Obstetrician/Gynecologist ...	= 1 word
A	= 1 word
Dalton, MD 01622	= 3 words

As a further example, here is a typical ad and how the pricing for each insertion is calculated:

MEDICAL DIRECTOR — A dynamic, growth-oriented home health care company is looking for a full-time Medical Director in greater New York. Ideal candidate should be board certified in internal medicine with subspecialties in oncology or gastroenterology. Willing to visit patients at home. Good verbal and written skills required. Attractive salary and benefits. Send CV to: Reply Box 0000, NEJM.

This advertisement is 58 words. At \$7.50 per word, it equals \$435.00. Because a reply box was requested, there is an additional charge

of \$75.00 for each insertion. The price is then \$510.00 for each insertion of the ad. This ad would be placed under the Chiefs/Directors/Department Heads classification.

How to Respond to NEJM Box Numbers

When a reply box number is indicated in an ad, responses should be sent to the indicated box number at the address under "Contact Information."

Classified Ads Online

Advertisers may choose to have their classified line and display advertisements placed on NEJM CareerCenter for a fee. The web fee for line ads is \$65.00 per issue per advertisement and \$130.00 per issue per advertisement for display ads. The ads will run online two weeks prior to their appearance in print and one week after. For online-only recruitment advertising, please visit nejmcareercenter.org for more information, or call 1-800-635-6991.

Policy on Recruitment Ads

All advertisements for employment must be non-discriminatory and comply with all applicable laws and regulations. Ads that discriminate against applicants based on sex, age, race, religion, marital status or physical handicap will not be accepted. Although the *New England Journal of Medicine* believes the classified advertisements published within these pages to be from reputable sources, NEJM does not investigate the offers made and assumes no responsibility concerning them. NEJM strives for complete accuracy when entering classified advertisements; however, NEJM cannot accept responsibility for typographical errors should they occur.

NEJM is unable to forward product and service solicitations directed to our advertisers through our reply box service.

Classified Ad Deadlines

Cardiology

MAINE — Join Central Maine Heart Associates, a well-established group of nine cardiologists in central Maine. Our team of Noninvasive, Interventional, and EP Cardiologists seek a Noninterventional Cardiologist to provide the full spectrum of inpatient and outpatient care to a service area of 400,000+. We are looking for someone who does ECHO and nuclear cardiography and TEE is preferred. The Central Maine Medical Family has a large number of Primary Care providers, which deliver an abundant referral base and our established Heart and Vascular Surgical team round out the services provided to our patients. Candidates can expect to also participate in clinical outreach and interest in involvement in large clinical research programs is a plus! We offer a competitive compensation and benefits package, too! Lewiston/Auburn is a safe community in which to raise a family, offers a wide range of schooling and housing options and cultural activities, and is centrally located to the both the mountains and coast. To learn more about this employed opportunity, please send CV to: Julia Lauer, Medical Staff Recruiter, Central Maine Medical Center; e-mail: JLauer@cmhc.org, call: 800-445-7431, or fax: 207-795-5696.

PARK RIDGE HEALTH IS SEEKING — An additional BC/BE noninvasive Cardiologist to join a spectacular team, bringing together under one roof a group of highly trained experienced physicians. Our staff works together, consulting regularly, and collaborating to provide patients with thorough, in-depth care. We are located in beautiful western North Carolina, very close to Asheville. This is an excellent opportunity to join a growing well-established practice. Tremendous salary and benefits (MGMA competitive), relocation, malpractice, and supplemental benefits offered. E-mail CV or call Josh Thompson at: josh.thompson@ahss.org; 828-687-5625.

MEDICAL DIRECTOR CLINICAL RESEARCH — Cardiovascular Division/Lillehei Heart Institute University of Minnesota. The Division of Cardiology and the Lillehei Heart Institute at the University of Minnesota is seeking an individual at the Associate Professor or Professor level (depending upon tenure track qualifications) with at least five years of clinical cardiac research experience with in-depth knowledge of clinical cardiology research with present or future NIH funding initiatives. Provide key leadership as Director of the Cardiovascular Clinical Trials program to further the programmatic and academic development of the clinical trials program and quality improvement. Will develop the vision and grow an NIH funded, world-class, leading-edge clinical research enterprise. This position will direct strategy, development of milestones, and work plan implementation in collaboration with the Director of LHI and the Director of CTSI. Qualifications include MD degree, license eligibility in Minnesota, and BC/BE in Cardiology and basic science or clinical research interest or experience. Preference will be given to those having a successful NIH funded research program. Please send CV and letter of interest to: the Search Committee for Cardiovascular Imaging, Cardiovascular Division, MMC 508, 420 Delaware Street SE, Minneapolis MN 55455. Applications will be reviewed immediately and accepted until position is filled. The University Of Minnesota is an Equal Opportunity Educator and Employer.

INVASIVE NONINTERVENTIONAL CARDIOLOGIST, PORTLAND, OREGON/VANCOUVER, WASHINGTON — We are an 18-person cardiology practice with multiple locations in Portland/Southwest Washington, McMinnville, and Gresham. We are recruiting for General Cardiology candidates with a full range of general cardiology skills, including Echo, diagnostic Cath, nuclear, and BE/BC. We have two metro positions and two suburban positions available. We offer a competitive salary and benefits package as well as an opportunity for full partnership. Please forward CV to: Northwest Cardiovascular Institute LLP, Attn: Sally Sparling, CEO, 2222 NW Lovejoy, Suite 606, Portland, OR 97210; sallysparling@nw-ci.com

Critical Care Medicine

CRITICAL CARE, OKLAHOMA CITY — St. Anthony Hospital in Oklahoma City is seeking BC/BE Critical Care Medicine physicians. Experience is desired, but new fellowship candidates will be considered. This straight critical care position (12-hour shifts, no home call) offers an opportunity to join a growing, multi-disciplinary Intensivist team with equal, shared coverage between physicians (typically 7 days on, 7 days off), and to work in a new ICU/Critical Care unit which is being built at the hospital. St. Anthony Hospital, a state-of-the-art health care facility, is part of SSM Health Care Oklahoma, based in Oklahoma City, a vibrant, growing community with one of the strongest economies in the country. For more information, contact: Lisa Lewis, Director Physician Development: lisa_lewis@ssmhc.com; 405-272-7952.

NON-INVASIVE CARDIOLOGIST

The Department of Cardiology within the John Ochsner Heart and Vascular Institute in Baton Rouge, Louisiana is searching for a **Non-Interventional Cardiologist** to join our multispecialty group practice.

We are looking for an energetic non-interventional or non-invasive cardiologist to join our 5 physician Cardiology group at our Baton Rouge campus. Ochsner has a multispecialty physician group of more than 150 physicians based in Baton Rouge (www.ochsner.org) with a 201-bed hospital, the Ochsner Medical Center of Baton Rouge.

The Ochsner Baton Rouge Cardiology group is part of and supported by the larger system-wide Department of Cardiology that includes 41 Board certified cardiologists practicing at eight locations throughout Southeastern Louisiana. The Baton Rouge cardiology group offers a full-service cardiovascular practice including all phases of state-of-the-art cardiovascular disease management including advanced imaging, percutaneous coronary revascularization and open heart surgery.

Baton Rouge, the state capital, is a vibrant, modern city, located less than an hour west of New Orleans. The Baton Rouge metropolitan area has a population of over 600,000 and is home of both Louisiana State University and Southern University.

Please e-mail CV to:

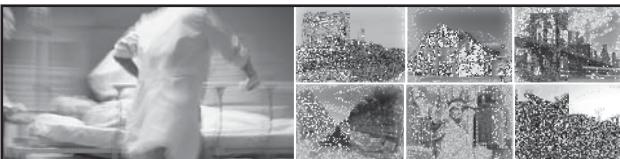

cwhite@ochsner.org

Christopher J. White, M.D.

System Chairman for Cardiovascular Diseases

John Ochsner Heart and Vascular Institute

(504) 842-3717

Director of Gastroenterology and Staff Gastroenterologist

The North Shore-LIJ Department of Medicine at **Staten Island University Hospital** is looking for a **BC Director of Gastroenterology**, as well as a **BC/BE Staff Physician in Gastroenterology** to join this growing division on **Staten Island, New York**.

This newly created division will include a Director of Gastroenterology, gastroenterology faculty, and advanced practice providers. This team will be responsible for both inpatient and ambulatory gastroenterology services, including hepatology and advanced endoscopy services, as well as academic responsibilities and research initiatives. Academic responsibilities include teaching medical students and residents, as well as a potential future ACGME-accredited Gastroenterology Fellowship Program.

The newly appointed Director will be responsible for day-to-day operations within the Division of Gastroenterology, including clinical and administrative oversight for both inpatient and outpatient operations, recruitment of junior faculty and advanced practice providers, research initiatives, academics and continuous quality improvement. The Director will also be expected to develop relationships with community organizations involved in gastroenterological disease management; including the development of educational and outreach forums.

Founded in 1861, Staten Island University Hospital is a 714-bed, specialized teaching hospital located in New York City's 5th and fastest growing borough. Occupying two large campuses, plus a number of community-based health centers and labs, the hospital provides quality care to people on Staten Island, the New York metropolitan region, and patients from around the world.

Staten Island is convenient to either Brooklyn or New Jersey via one of many bridges, and you can easily reach Manhattan via ferry. The Island affords suburban living within the confines of the Big Apple – the best of both worlds!

We offer a competitive salary and comprehensive benefits package. For further information, please contact **Laura Screeney, FASPR, Corporate Director, Physician Recruitment** at (888) 685-7545.

To apply, please visit www.nsljphysiciancareers.com

An Equal Opportunity Employer. M/F/D/V

The future of medicine is closer than you think.

Don't wait for tomorrow to be a part of change today.

One Medical Group is a primary care medical practice designed by physicians who got tired of working within a broken system. So we decided to start a primary care group designed on the original principles of quality medicine: listening, evidence, collaboration, trusted relationships—and more time with patients, not paperwork.

Recognized by The New York Times for our innovative model (started by the original designer of Epocrates), we're searching for the best and brightest internal medicine and family physicians who believe there's a better way to practice medicine. Successful candidates should be:

- Academically-trained and interested in practicing evidence-based medicine
- Comfortable with a broad spectrum of primary care, disease management and prevention
- Open to constantly improving care processes
- Comfortable with information technology
- Wanting to spend time with patients, not paperwork
- Interested in setting a new standard in primary care and being part of a change movement

See our opportunities at onemedical.com/jobs or please email your CV to Emerson Moses at ermoses@onemedical.com

Medical Education Director Lao Friends Hospital for Children

Friends Without A Border (Friends) is building Lao Friends Hospital for Children (LFHC) in Luang Prabang, Laos, in partnership with Luang Prabang Provincial Hospital (LPPH) and Health Department: estimated to open in Spring 2015. LFHC will become a teaching hospital and serve as the pediatric wing of LPPH. Its services will include IPD, OPD, ER, ICU, OT, Radiology and HIV Homecare/Outreach program to the underserved population of Luang Prabang Province. LFHC will also develop programs aimed at training hundreds of Laotian healthcare workers and reaching out the community to teach health promotion and disease prevention. Friends seeks a Medical Education Director (MED), who is committed to training the next generation for high-quality and compassionate care to the children of Laos.

The MED's primary function will be the clinical and didactic education of the physicians and nurses currently working in the Pediatric Department of LPPH during the approximate 14 months that it will take to build LFHC; including supervision of pediatric medical care, clinical rounds, and the design and implementation of didactic lectures. The MED will also assist in the design and implementation of our Community Outreach Programs to the District Hospitals and Health Centers throughout Luang Prabang Province.

The ideal candidate has • M.D. with recent pediatric clinical experience • International experience in providing pediatric medical care • Knowledge of Laotian people/culture (or of Southeast Asia) • Demonstrated leadership, strong organizational skills, integrity, and a confidence-inspiring attitude • A minimum commitment of four months to live and work in Luang Prabang. **The position is open immediately, but must begin no later than Jan. 15, 2014.**

Send CV with a cover letter with the subject "Medical Education Director" to: hr@fwab.org

Friends Without A Border

Associate Professor/Professor • Ob/Gyn and Reproductive Medicine STONY BROOK MEDICINE

Stony Brook Medicine's Department of Obstetrics, Gynecology and Reproductive Medicine seeks to recruit an established investigator for the position of Vice Chair for Research. The Vice Chair will be responsible for coordinating all research proposals, mentoring junior faculty, enhancing research funding, and allocating research space in consultation with the Chair. The Vice Chair will participate in budgetary and strategic planning as well as in the development of programs and services to support the research needs of the Department. The Vice Chair will also coordinate and supervise the Annual Research Day. As Vice Chair for Research, the candidate will have the opportunity to recruit other physician scientists and basic scientists to the Department.

Stony Brook Medicine's Department of Obstetrics, Gynecology and Reproductive Medicine currently has 31 full-time faculty representing the Divisions of General Ob/Gyn, Maternal Fetal Medicine, Gynecologic Oncology, Reproductive Endocrinology and Infertility, and Midwifery. The Department has an Ob/Gyn residency program (5 residents/year) as well as fellowships in Maternal Fetal Medicine and Minimally Invasive and Robotic Surgery. The Department is a research site for the Gynecologic Oncology Group (GOG). Stony Brook University Hospital is a Regional Perinatal Center and provides Perinatal Services for the 1.4 million residents of Suffolk County.

Stony Brook University Hospital is a 603-bed Tertiary and Quaternary care hospital that has recently undergone a \$500 million expansion including new ORs, a new Labor and Delivery Suite, a new Neonatal Intensive Care Unit, and new postpartum and antepartum units. With the recent approval of the NYSUNY 2020 Challenge Grant to the University and the announcement of the largest gift ever to public higher education in the State of New York, Stony Brook School of Medicine is embarking on a transformational expansion of the biomedical and clinical research enterprise. This will include the building of a new Children's Hospital and a Medical and Research Translation (MART) Building. This will be an additional 500,000 square feet of clinical and research space to further the academic mission of Stony Brook Medicine.

Required: MD/DO or MD/PhD, Board Certification/Eligibility in Ob/Gyn, eligibility for NYS License and evidence of a strong record of funded research and publication. This is a faculty academic position at the Associate Professor/Professor level. To qualify for an appointment as an Associate Professor or Professor, the candidate must meet the criteria established by the School of Medicine (School of Medicine's Criteria for Appointment, Promotion and Tenure). Review of all applications will continue until the position is filled.

For a full position description and application procedures, visit www.stonybrook.edu/jobs

(Ref. # F-8075-13-08) and submit application materials to: Todd R. Griffin, MD, Chair, Department of Obstetrics, Gynecology and Reproductive Medicine, c/o Kathleen Molloy Health Sciences Tower, T-9, Room 020, Stony Brook Medicine, Stony Brook, New York 11794-8091

St. Vincent's Named Best Hospital in CT

St. Vincent's Multi-Specialty Group and St. Vincent's Urgent Care Walk-in Centers are a part of St. Vincent's Medical Center, a Magnet Hospital that has been named **Best Hospital in Fairfield County and in all of Western Connecticut for 2013 - 2014 by U.S. News & World Report**. We are also the primary teaching hospital for the Frank Netter School of Medicine at Quinnipiac University.

OPEN POSITIONS

Primary Care Physician: St. Vincent's MultiSpecialty Group is looking for a highly motivated, dynamic Primary Care Physician to work in an outpatient setting. Qualified candidates will be BC/BE in Internal Medicine. This opportunity is located in a shoreline community in Western, CT. Experienced candidates preferred. SVMMSG has nearly 200 physicians, nurse practitioners and physician assistants board certified within their respective specialties, we are extremely proud to be one of the largest provider networks within Fairfield County.

Urgent Care Physician: St. Vincent's Urgent Care Centers provide complete walk-in, urgent care, and personal healthcare services to meet the health needs of the community. We are seeking a staff physician for a network of four urgent care centers in Fairfield County. Candidates should have a broad experience with minor surgical procedures, excellent diagnostic skills and be BC/BE in family practice, internal medicine or emergency medicine. Competitive salary and full benefit package is available.

Interested candidates should contact Elena Geanuracos at:

Elena.geanuracos@stvincents.org, 203.576.6275 or visit www.stvincents.org/careers

St. Vincent's
Health Services

www.stvincents.org

Our commitment to providing patients and employees with the highest standard of care is at the heart of all we do. As an employer, we value all of our staff and have a strong commitment to development, diversity, and work-life balance.

VA Pittsburgh Healthcare System (VAPHS) has an immediate opening for the Vice President of Critical Care. Formal training and experience in Critical Care Medicine required. Responsibilities will include administrative oversight of the Intensive Care Units, Emergency Department, and Respiratory Therapy. An academic appointment at the University of Pittsburgh school of Medicine (UPSOM) and research support may be available for qualified individuals.

Additionally, we are seeking an experienced, board certified Infectious Disease (ID) specialist to serve as Chief of the ID Division of the Medicine Service Line at VAPHS. VAPHS is a tertiary care referral center academically affiliated with UPSOM whose clinical activities include the largest liver transplant program within the VA system and an active renal transplantation program. Candidates with ongoing clinical investigation and experience in clinical education are preferred. The candidate must qualify for an academic appointment at the UPSOM.

The VAPHS operates as a level 1A facility with thirty-eight ICU beds and a sixteen-bed Emergency Department, which provides 24/7 care for over 25,000 annual visits by our Veteran patients. We are a tertiary referral facility for half of VISN 4. We have state-of-the-art Intensive Care Units and provide higher level medical services including liver and kidney transplants, open heart surgery, and abdominal transplants. The Emergency Department (ED) has 24 hour access to a cardiac catheterization lab for patients with ACS, and VAPHS is also a limited access stroke facility. VAPHS has an active affiliation with the University Of Pittsburgh School of Medicine as well as other area medical schools and is currently building a state of the art simulation center which will provide world-class healthcare simulation for a broad spectrum of providers and applications.

If you're an experienced physician, you understand the impact that business has had on health care. For VA, patient care is not a business decision. Veterans are our highest priority and we are committed to providing them with the highest quality care possible. *That patient focus lets you practice medicine the way it was meant to be practiced!* VA physicians work with the entire interdisciplinary care teams to deliver state-of-the-art medicine using some of the most advanced medical technologies in the nation.

CEDARS-SINAI

Director, Health Services Research - Cedars-Sinai Health System

Cedars-Sinai has begun a national search for a Director, Health Services Research. This faculty leader will direct a system-wide, interdisciplinary health services research initiative to advance multi-disciplinary research focused on improving the value of health care, including the quality and efficiency of care, for patients cared for at Cedars-Sinai Health System and beyond. This is an exciting opportunity for an expert in health services research and a visionary leader who thrives on driving change to leverage the broad and diverse patient population of a leading academic medical center that is undertaking significant transformational efforts. Cedars-Sinai provides a unique health system with a pluralistic medical staff model (faculty, private practice, medical groups), the largest non-university private hospital in the West Coast, an IPA and medical group, two Accountable Care Organizations (ACOs), a state-of-the-art electronic medical record system, Patient Centered Medical Homes and multiple levels of care from primary through quaternary.

ABOUT THE POSITION: The Director of the Health Services Research Program will be responsible for leading a highly collaborative system-wide change effort focused on improving the value of health care throughout Cedars-Sinai Health System. The goal is rigorously designed translational research that demonstrates new approaches to measurably improving the cost, quality, and safety of health care.

Specific programmatic leadership responsibilities include:

- Responsibility for implementing a strategic plan in Health Services Research and applying its principles to Clinical Transformation and Population Health. The successful candidate can be a physician or a non-physician researcher who will use his/her knowledge, experience and research background to elucidate the relationships between cost, quality of care, clinical efficiency.
- Leverage and integrate internal and external resources to build necessary infrastructure and provide administrative oversight for all activities in health services research.

Research leadership activity will include:

- Providing comprehensive and multi-disciplinary scientific and analytical services and helping to support and lead projects aimed at identifying, quantifying and reducing undesirable variation, improving quality of care, and optimizing appropriateness, efficiency and the value of health services delivered.

Required Qualifications:

- MD, MD/PhD or PhD degree required; additional degrees, including MPH, CDM, MBA, MS or other related degrees are preferred
- At least 5-7 years of experience in health service research in an academic, private research, health plan or health system environment.
- A record of extramural funding will be beneficial
- Leadership experience with teams and a record of mentoring other investigators

Cedars-Sinai Medical Center, is proud to be recognized on the US News and World Report Honor Roll as #13 on the national Best Hospitals list for 2013-2014. We are located in a highly desirable location in the City of Los Angeles. Competitive salary, benefits and relocation support will be provided. Qualified applicants should send a cover letter and CV to: [HSRSearch c/o Academic.Recruiting@csns.org](mailto:HSRSearch@c/o.Academic.Recruiting@csns.org)

Cedars-Sinai encourages and welcomes diversity in the workplace AA/EOE

RI[®] The Rogosin Institute

STAFF NEPHROLOGIST

The Rogosin Institute is a non-profit medical care and research organization affiliated with NewYork-Presbyterian Hospital and Weill Cornell Medical College of Cornell University. Rogosin is one of the premier centers for the diagnosis and management of kidney disease in the United States - and we are growing! The Institute also treats patients with diabetes, hypertension, lipid disorders and cancer and conducts research in these areas. Importantly, we are engaged in outcomes research and the development of models of care for people with chronic and end-stage kidney disease, as well as chronic illness more generally, as part of our commitment to be the "very best of the best" in clinical care and research, while also contributing to healthcare reform.

As a part of building the Rogosin team needed to fulfill our mission and vision, we currently have an opportunity for a **Staff Nephrologist** to join our academic faculty practice. Candidates with particular interests in peritoneal dialysis, inpatient nephrology and clinical research are preferred. This is an opportunity to be part of a team dedicated to building something unique in nephrology today. Join us, if you want to be part of the "best of the best" in healthcare!

QUALIFICATIONS: We require a valid NYS MD license and DEA certification. Candidates must be Board Certified in Nephrology.

We offer a competitive salary and benefits package commensurate with experience.

Interested applicants should forward an updated resume and salary requirement to:

did9005@nyp.org or via fax at: (212) 249-4659

This is the leadership position you've been looking for – Medical Director of Hospital Medicine

Baystate Franklin Medical Center (BFMC), located in beautiful western Massachusetts, has begun a search for the position of Medical Director of Hospital Medicine. This individual will have the responsibility of leading a well-established team at our 93-bed acute-care hospital and will enjoy strong senior leadership support. The ideal candidate will provide leadership in program development and quality improvement initiatives and must have a commitment to community and teamwork. A strong business acumen, proven track record of recruiting and retaining clinical staff and excellent communications skills are desirable. Hospital medicine leadership experience is preferred and ABMS board-certification is required.

BFMC is a community hospital that provides a wide-range of both inpatient and outpatient clinical and support services to residents of Franklin County. As the only hospital in Franklin County, BFMC brings the best of two worlds to our patients- care provided close to home by neighbors they know and trust, plus ready access to the full spectrum of specialists and services based at our affiliated tertiary hospital, Baystate Medical Center in Springfield, which is the western campus of Tufts University School of Medicine.

THE CHRIST HOSPITAL HEALTH NETWORK CINCINNATI, OHIO

MEDICAL ONCOLOGIST

The Christ Hospital Health Network is seeking a full-time BC/BE medical oncologist to join our expanding oncology services in the Greater Cincinnati area. We are a compassionate, dedicated group committed to providing the highest quality care in the region. The candidate will be an outstanding, motivated clinician who will be able to work in a collaborative environment with a strong interest in clinical trial enrollment. Although the candidate is expected to care for all cancer types, a specialty interest is encouraged. The position will include a highly competitive compensation with a full benefits package, including relocation assistance.

THE CHRIST HOSPITAL HEALTH NETWORK ORGANIZATION: The Christ Hospital Health Network (TCHHN) is a regional system of care that extends The Christ Hospital's nearly 125 years of superior care and leadership to more than 100 locations in the Greater Cincinnati area. The Network delivers integrated, individualized healthcare and wellness services through its comprehensive physician network, advanced specialty services and the region's leading hospital, a 555-bed, not-for-profit acute care facility.

In 2013, The Christ Hospital placed three patient care programs among the nation's best in *U.S. News & World Report's* Best Hospitals 2013-14 rankings. The Christ Hospital is nationally ranked for Orthopaedics (29), Geriatrics (29) and Diabetes & Endocrinology (31). The report also ranks The Christ Hospital as the #1 hospital in the Cincinnati metro area and #4 in the state of Ohio, with high performing programs in cancer; cardiology & heart surgery; ear, nose and throat; gastroenterology & GI surgery; gynecology; nephrology; neurology & neurosurgery; pulmonology; and urology. This is the 14th consecutive year The Christ Hospital has been recognized among the nation's top 50 hospitals by *U.S. News*.

The Christ Hospital has also been recognized by National Research Corporation (NRC) for seventeen consecutive years as Cincinnati's *Most Preferred Hospital*, and in 2010 achieved Magnet® Status from the American Nurses Credentialing Center. The Christ Hospital has also been named one of the nation's *50 Top Cardiovascular Hospitals* by Truven Health Analytics, formerly Thomson Reuters.

Our physicians: The Christ Hospital medical staff includes many of the most well-renowned physicians in the Tri-state area. In fact, National Research Corporation (NRC) ranks them as the area's best. A number of our physicians are nationally and internationally acclaimed—for their contributions to patient care, teaching and research. The staff includes more than 1,000 physicians across dozens of specialties, including nearly 200 physicians who are employed by The Christ Hospital Health Network.

HEMATOLOGY FACULTY POSITION, UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL.

The Division of Hematology/ Oncology, Department of Medicine in conjunction with the NCI designated Lineberger Comprehensive Cancer Center is seeking to recruit three faculty members to assist in the development of a leukemia service line at the University of North Carolina at Chapel Hill. These positions coincide with plans for the University of North Carolina at Chapel Hill to increase inpatient bed volume for leukemia patients by approximately 50% in the next year. These are Open Rank faculty positions.

While there is no particular area of leukemia research required for these positions, successful candidates will have a proven track record of performing clinical/translational or basic research investigating the pathophysiology, treatment or outcomes of patients with acute lymphoblastic, acute myelogenous leukemia, and/or myelodysplastic syndrome. Responsibilities will include patient care, clinical/translational research, participation in multi-disciplinary conferences and teaching. Faculty with a specific interest in laboratory investigation will be expected to compete for extramural funding from the National Institutes of Health and other not-for-profit funding agencies. Candidates must have an M.D. or M.D./Ph.D. degree be BC in Medicine and be BC/BE in hematology and or oncology.

Applicants should submit an online application and include a letter of interest and their CV. Apply online at <http://unc.peopleadmin.com/postings/13023>. Please follow the instructions found there to complete the application process.

MASSACHUSETTS
GENERAL HOSPITAL

CANCER CENTER

Massachusetts General Hospital Cancer Center Division of Hematology/Oncology

Clinical Faculty Position in Hematology/Oncology: Hematology

Established in 1811, Massachusetts General Hospital is one of the world's most distinguished academic medical centers, and is the original and largest teaching hospital of Harvard Medical School. The Massachusetts General Hospital Cancer Center is among the leading cancer care providers in the United States. It is a founding member of a Harvard Medical School consortium designated by the National Cancer Institute as a comprehensive cancer center, forming the largest cancer research collaboration in the country. At Massachusetts General Hospital promising new treatments are revolutionizing the future of cancer medicine.

The Massachusetts General Cancer Center currently seeks applications from board-certified or board-eligible oncologists for a faculty position emphasizing clinical care in the Survivorship Program. This position is at the level of Instructor, Assistant or Associate Professor of Medicine at Harvard Medical School.

The selected applicant will be responsible for leading the survivorship program at the MGH Cancer Center. Key program components include the following: collaboration with Disease Centers; development of electronic survivorship care plans; survivorship research; patient education and CME; care redesign, and coordination with primary care physicians and specialists within MGH. The Survivorship Director will also maintain a practice in a disease center.

Emphasis is placed on building collaborative relationships with other caregivers at MGH. Women and minority candidates are urged to apply. Interested applicants are invited to submit their curriculum vitae to:

Bethyl Rose
David Ryan, M.D.

Clinical Director, Massachusetts General Hospital Cancer Center
Chief, Division of Hematology/Oncology
Massachusetts General Hospital, 10 North Grove Street, LRH-208
Boston, MA 02114

Massachusetts General Hospital is an Equal Opportunity/Affirmative Action Employer.

UNIVERSITY OF
Nebraska
Medical Center

DEAN, COLLEGE OF PUBLIC HEALTH

The University of Nebraska Medical Center announces a national search for the next Dean, College of Public Health.

The College of Public Health, UNMC's newest college, became fully operational in 2007. With significant investment over the past 5 years, the College has grown to 57 faculty FTEs and \$15M in annual research expenditures. In 2011, the College of Public Health moved into a new, \$15 million, state-of-the-art 62,600 square foot building, located on the UNMC campus and obtained a five year CEPH accreditation, extending to December of 2016.

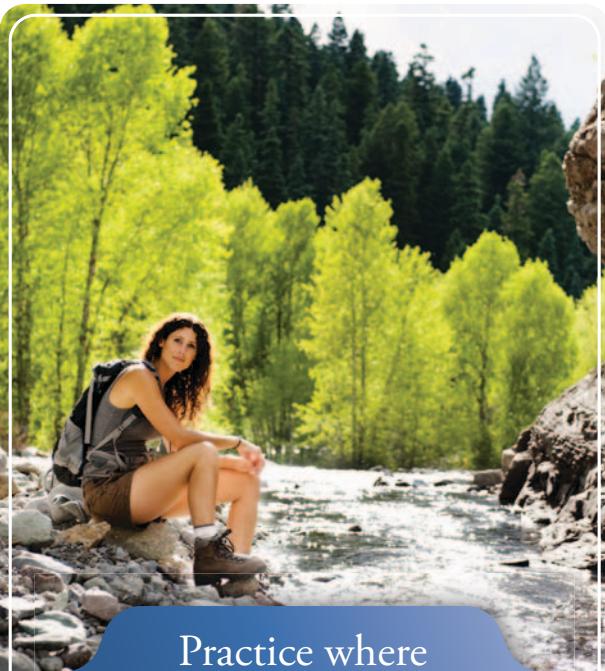

The new Dean will be a nationally recognized leader in a public health-related field with the interpersonal skills, experience, and drive to lead the College into its next phase. She/he will focus on continuing the growth of student enrollment with excellent programs and faculty, establishing priorities for investment in new and existing programs, and seeking collaborative initiatives with the many thriving academic and community leaders within and outside of UNMC.

Candidates will hold an M.D., M.D./Ph.D., or Ph.D. in a recognized field of public health, and have a sustained record of academic accomplishment resulting in national and/or international recognition in the public health community.

Korn/Ferry International is assisting UNMC with this important search. Please forward, as soon as possible, applications or nominations of appropriate candidates to: Warren E. Ross, M.D., c/o terri.toth@kornferry.com, Korn/Ferry International, 1835 Market Street, Suite 2000, Philadelphia, PA 19103.

UNMC is an Equal Opportunity/Affirmative Action Employer

Chief, Commack Medical Oncology Service Memorial Sloan-Kettering Cancer Center

Memorial Sloan-Kettering Cancer Center (MSKCC) is seeking a dynamic oncologist to join the Department of Medicine as Chief of the Commack Medical Oncology Service. MSKCC at Commack, NY, on Long Island, is a state of the art, free-standing complex with 7 disease-focused medical oncologists, radiation oncologists, radiologists, surgical oncologists, and a neuro-oncologist. The highly successful Commack Medical Oncology Service had 19,000 medical oncology visits in 2012, and administered 16,000 infusions. The Chief will lead the Service through a phase of strategic growth over the next 5 years. The ideal candidate will have a track record of superior clinical service, academic accomplishment, and excellence in teaching and leadership, and possess effective communications skills.

The candidate must be eligible for medical licensure in New York, board certified in Medical Oncology, and otherwise qualified for an appointment to the faculty of MSKCC; experience in the management of the hematologic malignancies would be beneficial.

Interested candidates should submit a letter of interest, and their curriculum vitae and bibliography to:

Han Xiao, M.D., Chair
Medical Oncology Service Chief Search
c/o Clara Irizarry, Administrative Manager
Office of Academic Recruitment, MH
Memorial Sloan-Kettering Cancer Center
1275 York Avenue, New York, NY 10065
212-639-5819, E-mail: irizarrc@mskcc.org

MSKCC is an equal opportunity employer with a strong commitment to enhancing the diversity of its faculty and staff. Women and applicants from diverse racial, ethnic, and cultural backgrounds are encouraged to apply.
